Hello all,

First of all: HAPPY NEW YEAR to you and yours and plenty of DX!

The start of the 2013 DX reception was not too bad, really:

Hi Chuck,

Nice to see that DX propagation works both ways! O:)
Happy 2013 to you & yours.

Regards - Dirk

Although garbled but not heard here in Northwest Germany for a long time. And some very nice decodes from SUZ Egypt.

Perseus + Studio 1 + ALA1530
VAC cable parameters 2500 ... 192000 seem to work well.

73 es healthy 2013 to all. And good DX, of course.
Hans, DL4YBP

Guess this is Sydney, Canada.

R&S EK070 + ALA1530, old notebook + old external soundcard.

73
Hans, DL4YBP

4674. Re: [REU] Log from Antwerp, BEL (> 1500Km)

Yahoo group: navtexdx (2013)
Date: 2013-01-01 20:57:42 UTC
From: DirkCL
Topic: 4043 Message: 4674

All,

Tonight's highlights:
- Long strings of messages from Ismailia in 2 time slots,
- San Juan SNR topping at ~30..35, as usual interrupted by Ostend.
- Very long time no see: heavily garbled fragments at 04:05, the Miami time slot. I'm a bit unsure, can anybody confirm?

Regards - Dirk

4675. Miami at 0405

Yahoo group: navtexdx (2013)
Date: 2013-01-01 21:20:07 UTC
From: Jack Smith
Topic: 4043 Message: 4675

Miami as received here on east coast US at the 0405 time. Copy not the best here either, but the first part of the msg confirms it originated at Miami.

Jack K8ZOA

From: Graham
Topic: 4043 Message: 4676

Good evening all,

Another interesting example of some of MF propagation.

Jack in Virginia almost half way between myself and Miami had good copy
of the 04:00 Miami NAVTEX broadcast but notes that the "copy not the
best here either". This was in response to Dirk's earlier post.

I checked my YaND log and noted that I too copied Miami in the 04:00
time slot but I had perfect copy right up until 04:10 when Sept Ilse
started up and blocked Miami

To wit, the start of the Miami broadcast at 04:00:

Thanks Jack!

The last time I got decent copy from Miami was februari 2012.
In 2009/2010 (the sunspot minimum) it was logged almost daily here.
Even New Orleans popped up in the logs at times!

Regards - Dirk

Hello all,

General propagation was better last night, which is not reflected in the log, unfortunately.

On an other note, Dirk do you know someone which uses Studio 1.
I have been reading that it is possible to run multiple receivers at one time.
So, I wonder if it should be possible to run it with a RX LF Ensemble tuned to 504 kHz and set one receiver to 490 kHz and a second to 518 kHz.

Though I have all the parts at hand for building the hardware for two receivers, I have not yet come around to do so.
As I have a RX LF Ensemble at hand, this might be a quicker solution!

4682. Studio 1

Yahoo group: navtexdx (2013)
Date: 2013-01-02 11:26:52 UTC
From: hans_juergen_karius
Topic: 4682 Message: 4682

Hi Roelof,

I tried Studio 1 a few days ago together with the Perseus. VAC cable range set at 62500 ... 192000. That worked quite well. Studio 1 however only at one instance = only one receiver running.

Some days before that I tried Studio 1 with several instances. Had the same idea like you. One virtual Studio 1 rx on 490 kHz and the other on 518 kHz. I used one physical radio = one Perseus. It was no problem to receive both frequencies but I did not manage to send the two data streams of 490 and 518 to two different decoders at the same time. I could only send the data stream of one frequency. Either I made a mistake or it does only work with more than one physical rx.

By the way, Studio 1 does not need much CPU power. One day however I tried eight virtual receivers and that brought the CPU load of my I7 notebook over 90%. ;-)

CTA RDO = Constanta Radio.

Oh yes, they are imaginative at Constanta Radio. And I am not. ;-)

Thank you Joachim.

Roelof, Hans,

@ Roelof: It's no problem to use three frequenties with Studio 1.

@ Hans: You have to make a second virtual cable in VAC. Set the output
of de 490 to VAC1 en Yand Receiving audio from VAC1. For the 518 you can
use VAC2 etc.

Vincent

Hallo Vicent,

I have created two virtual cables. Guess I have not connected them properly. I'll try again.

Thanks and 73.

4687. Re: Studio 1

Yahoo group: navtexdx (2013)
Date: 2013-01-02 13:03:04 UTC
From: hans_juergen_karius
Topic: 4682 Message: 4687

Hallo Vincent,

Please have a look at the following setup.

I have the Perseus receiver, set up two virtual cables = VAC1 and VAC2 , set up two Studio1 VRXes = virtual receivers 0-0 and 0-1, and 2x Yand (5.6 and 6.1)

Studio1 VRX 0-0 on 490 kHz and output VAC1 --> Yand 5.6 Input VAC1.
Studio1 VRX 0-1 on 518 kHz and output VAC2 --> Yand 6.1 Input VAC2.

Only VAC2 is working here. VAC1 does not give a signal.

How can I make them run both? What have I to selecet in Windows 7? Or do I have to select a special setting in the VAC software?

That is a nice beginning of 2013. ;-)

Thanks.

Hello Hans,

And the one above is Las Palmas, Canary Islands.
Regarding the Romanian station Constanta on 490, if Yand tags this as UNID, you need to update the station database.

Regards - Dirk

Las Palmas as received here in the 04:00 time slot:

Hi Roelof,

Vincent just explained the S1/VAC settings to Hans here in the group.
Regarding the RX LF Ensemble, I don't know whether S1 can interface to it, I guess you'll need a "IOExt" driver for it??

Regards - Dirk

Hi Vincent, Roelof, Dirk

"What if you use both 6.1?"

After I read your idea I installed 6.1 twice in different directories and tried that. The result was the same. Only one VAC (virtual audio cable) carried the signal.

I will check the VAC help and will also look for Win7 help for the audio settings. Somewhere there must be a fault.
Thanks.

Hans, DL4YBP

I could only send the data stream of one frequency. Either I made a mistake or it does only work with more than one physical rx.

From: Roelof Bakker
Topic: 4682 Message: 4692

Hello Hans,

I am using an EMU 0202 external soundcard with my PERSEUS.
When I decode NAVTEX from my PERSEUS, the audio out is routed back to the line input with a cable.
This works excellent.

So, I guess that for two channel reception, you need two soundcards.

If you have two soundcards in your computer, you might try a hardware solution first.
(I have three here, so no need so far for VAC)

73,
Roelof

4702. WSPR LOG

Yahoo group: navtexdx (2013)
Date: 2013-01-04 08:29:03 UTC
From: Vincent LECLER
Topic: 4702 Message: 4702

Hi All,

Due to the increasing activity on MF amateur band and on WSPR mode, I would like to ask all of you this 2 questions :

1- Do you want to see 137.5 KHz / 472 KHz log on HAM or OTHER like they are today ?

2- Do you want tu sqee on REU WSPR HF log (lf/mf/1.8/.../28.0 MHz) ?

Thanks in advance for your answer.

Hi all,

The Canadians were out in full force it seems!
I have one UNID in the 518/23:20 time slot assigned to 04U Fundy, but I'm unsure. Perhaps an off-schedule message from Labrador/St. John's? Can anyone at the other side of the pond clarify this?

Thanks - Dirk

4715. Re: [navtexdx] Re: [REU] Log from Antwerp, BEL (> 1500Km)

Yahoo group: navtexdx (2013)
Date: 2013-01-05 16:04:20 UTC
From: Jack Smith
Topic: 4043 Message: 4715

UnID message is CB51, I believe.

The first part of the message was badly interfered with here on the east coast of the US by Puerto Rico but the header looks clean.

Jack K8ZOA

4716. Re: [navtexdx] Re: [REU] Log from Antwerp, BEL (> 1500Km)

Yahoo group: navtexdx (2013)
Date: 2013-01-05 19:26:03 UTC
From: Graham
Topic: 4043 Message: 4716

Good day Dirk (and all),

I am pretty sure it wasn't Fundy as I copies a full message from Fundy from 23:19:26 til 23:23:11 and when Fundy stopped there was another station transmitting some weather.

VCK started up at 23:24:17 til 23:25:42 and sent a weather message which blocked whatever other station was transmitting.

When VCK finished "the other station" was still transmitting and I copied a snippet much like your's.

XMJ329 Prescott was active from 23:29:35 til 23:32:09 which in turn continues to block "the other station".

So, I am pretty certain it was not Fundy and not certain it was not VCK/VCG Sept Isles nor XMJ329 Prescott and certainly not the normal traffic from San Juan.

If I had to guess then I think it was likely VOK Labrador. The snippet contains pieces that I would normally see in forecast from Labrador and I get similar snippets every night about the time.

As someone else pointed out a while ago, you can usually the weather forecasts on line which can help identify transmitting stations.

Environment Canada is responsible for weather forecasts in Canada with the country divided into different areas each having it's own forecast center. NAVTEX weather forecasts have a message header of FQCN followed by two digits. The two digits generally refer to a forecast area within a centers area of responsibility is not sufficient to identify the forecast area completely. The FQCNxx is followed by a four letter identifier as to the forecast center.

FQCNxx and the forecast center can identify the message as to area and region as follow:

FQCN33 CWHX NAVTEX FOR SAINT JOHN VAR
FQCN33 CWVR NAVTEX FOR TOFINO VAE
FQCN33 CYQX NAVTEX FOR ST. JOHN'S VON

FQCN34 CWHX NAVTEX/1 FOR SYDNEY VCO
FQCN34 CYQX NAVTEX/2 FOR SYDNEY VCO

FQCN35 CYQX NAVTEX FOR LABRADOR VOK
FQCN35 CWVR NAVTEX FOR PRINCE RUPERT VAJ

FQCN36 CWNT NAVTEX FOR IQALUIT VFF

FQCN37 CWUL NAVTEX/1 FOR RIVIERE-AU-RENARD VCG
FQCN37 CWHX NAVTEX/2 FOR RIVIERE-AU-RENARD VCG
FQCN37 CYQX NAVTEX/3 FOR RIVIERE-AU-RENARD VCG

FQCN38 CWTO NAVTEX FOR PRESCOTT VBR

FQCN39 CWTO NAVTEX FOR THUNDER BAY VBA

CYQX is the Gander Forecast office, CWHX Halifax, CWVR Vancouver, CWNT Nunavut, CWUL Montreal, and CWTO Toronto.

This link will take you to the most recent NAVTEX forecast for Labrador VOK

http://www.weatheroffice.gc.ca/forecast/textforecast_e.html?Bulletin=fqcn35.cyqx

Unfortunately the forecast that was valid at the time Dirk copied the snippet is no longer available but you could check in near real time and you might find the forecast for which you have a snippet is still the current one.

cheers, Graham ve3gtc FN25ig

4717. Messages from Kodiak AK station re:Shell drilling barge Kulluk grounding

Yahoo group: navtexdx (2013)
Date: 2013-01-05 21:39:07 UTC
From: dschre2001
Topic: 4717 Message: 4717

Received these nav warnings last night from Kodiak Alaska station concerning the grounding of Shell drilling barge Kulluk. Copy somewhat cleaner than usual here in SE Arizona.

Hello Graham,

Thanks for the extensive analysis! I agree that the fragment was most likely Labrador. I was aware of the weatheroffice.gc.ca website, but as you say the content is being updated frequently, so the chance of finding a specific message (fragment) is small.

Regards - Dirk

4720. Identify 518 KHz Message Source?

Yahoo group: navtexdx (2013)
Date: 2013-01-06 18:38:14 UTC
From: Jack Smith
Topic: 4720 Message: 4720

Can anyone identify the source of the message fragment below? 518 KHz.

Immediately following the 4th line, 4H Prescott became active with a much stronger signal and captured the channel.

Date/Time group PYPOQP~UOR shift corrected should be 060910 UTC

Language looks to be French, the equivalent of "no message on hand" I believe.

The English version of that is a relatively common transmission from 4H Prescott, but the signal strengths are so different that I find it difficult to believe it was Prescott inadvertently sending the French version of no message on hand.

However, the date/time group matches the Prescott NAVTEX message HE91.

Jack K8ZOA
located near Washington DC.

2013-01-06 09:10:59> PAS DE MESSAGE EN MAIN
2013-01-06 09:11:00> NNNN

Who I see frequently sending this message in French on 518 Khz

Outside of approximately July 1 through Dec 15, Labrador VOK takes over
Iqualit's VFF broadcasts including this one at 09:10 UTC.

Unfortunately many of the common on line navtex schedules leave a bit to
be desired. Only digging through the many Canadian Coast Guard web pages
will reveal little tidbits of information such as that.

cheers, Graham ve3gtc FN25ig

Hello Jack,

Back in 2010, we had a similar mystery station popping up in the logs here in Europe, always in the 00:00 time slot. As you can see below in the examples from my archive, the X-identifier was used, so the theory at the time was that this must be originating from a Canadian station -presumably 4X Labrador - transmitting "no message on hand" erroneously in French, due to operator/computer error.

Maybe Labrador is doing it again?? You might check the SNR values for other Labrador messages and see if the SNR values are in the same ball park?

Regards - Dirk

Hi all,

No Canadians today, but some fairly long fragments from San Juan.
Although Las Palmas is a rare guest here on 518, it is received almost daily on 490 with nearly perfect decodes and sometimes in 2 time slots.

Att. Roelof: the antenna splitter works great! I have put the old faithful Lowe HF225 back to work, so I can now monitor 490/518 simulteanously.

Regards - Dirk

4724. Re: [navtexdx] Re: Identify 518 KHz Message Source?

Yahoo group: navtexdx (2013)
Date: 2013-01-06 20:01:47 UTC
From: Jack Smith
Topic: 4720 Message: 4724

Thanks to Dirk & Graham.

VOK 4X normally is much better than the SNR 1-2 seen in the recent fragment. Seldom if ever below 20 and usually in the 60-80 range this time of year.

But, propagation changes and even the close Portsmouth VA (4N) station is sometimes is nearly unprintable.

Jack

4726. 490 KHz Message Source

Yahoo group: navtexdx (2013)
Date: 2013-01-07 10:42:12 UTC
From: Jack Smith
Topic: 4726 Message: 4726

One badly garbled trans-Atlantic messages over night.

My tentative ID is 2G, Monsanto POR based on a few fragments that appear
to be Portuguese.

Also a somewhat better message from 1K Grindavik, ISL, 490 KHz.

2G, Monsanto POR??

Hi Jack,

This is very likely the message below, as received here on Jan 4th, and which is repeated frequently to report problems with the Horta transmitter.

4728. Re: 490 KHz Message Source

Yahoo group: navtexdx (2013)
Date: 2013-01-07 15:38:58 UTC
From: DirkCL
Topic: 4726 Message: 4728

Interesting tip for checking Portuguese Navtex messages. An archive of the last 3 months is available here online:

<http://anavnet.hidrografico.pt/NAVTEX/ListNavtex.aspx?Station=R>
(518 KHz, English)

<http://anavnet.hidrografico.pt/NAVTEX/ListNavtex.aspx?Station=G>
(490KHz, in Portuguese)

Estado (state) => tick Todos (all)

Assunto (subject) => tick required message type (Navwarn, meteo, etc..)

Regards - Dirk

4729. Re: [REU] Log from Antwerp, BEL (> 1500Km)

Yahoo group: navtexdx (2013)
Date: 2013-01-07 19:22:36 UTC
From: DirkCL
Topic: 4043 Message: 4729

Hi all,

Not a trace from San Juan Last night. Perfect copy from Labrador in the 03:50 time slot, but considerably weaker at 07:50, close to local sunrise.

Regards - Dirk

According to a Google search, the Drill Rig Henry Goodrich is currently operating in the Labrador area, so it's unlikely to be an Hawaii NAVTEX transmission.

I also captured that message, not very high quality print, though, and not enough to get a message header.

Most likely one of the Canadians, of course, based on the rig location.

Mark:

Same here, and my print starts with JA68 from Alaska. However JA68 is a very short message -- 34 seconds -- and ended before the Henry Goodrich fragment.

Here's the JA68 message in full from an earlier reception:

```

4739. Log from Portal AZ Jan 08 2012

Yahoo group: navtexdx (2013)
Date: 2013-01-08 19:32:09 UTC
From: dschre2001
Topic: 4739 Message: 4739

Here is last night's log(YaND)from Southeastern Arizona (Portal). The UNID at 0600 has to be Simiutak GRL but didn't get ID-ed

20130108 0351 518 $12W NMW Astoria, OR,USA 2023
20130108 0400 518 $04A NMA Miami,USA 2890
20130108 0411 518 $04B ZBM Bermuda Harbour ,BER 4161
20130108 0420 518 $12C NMC San Francisco (Point Reyes),USA 1403
20130108 0440 518 $04E NME Charleston,USA 2584
20130108 0450 518 $04F NMF Boston,USA 3541
20130108 0520 518 $04I XXX Upernavik/Disko Isl.,GRL 5454
20130108 0532 518 $04H XMJ329 Prescott, ON,CAN 2812
20130108 0546 518 $12H XLK835 Tofino, BC ,CAN 2337
20130108 0600 518 $00M UNID 0
20130108 0610 518 $04N NMN Portsmouth,USA 3068
20130108 0638 518 $12O NMO Honolulu ,HWA 4972
20130108 0640 518 $12Q NMQ Cambria,USA 1171
20130108 0650 518 $04R NMR San Juan,PTR 4464

Enough info here to ID SIMIUTAK:

20130108 0600 518 $00M UNID 0
2013-01-08 06:00:37> ZCZC MZ22
2013-01-08 06:00:47> 080600 UTC JAN3~3,~/433,)-, SIMIUTA~~~~UNG MESSAME(`9,~ HAND
2013-01-08 06:00:48> =/,`,,
2013-01-08 06:00:48>
2013-01-08 06:00:49> NNNN

Fairly new at this NAVTEX monitoring business, and am finally seeing some reasonable distances and variety of stations.

Alaska from here was conspicuously absent last night. Usually good copy.

Jack and Mark,
Thanks for the input guy, I would agree with Jack, probably a Canadian.

Jack.Smith@... writes:

According to a Google search, the Drill Rig Henry Goodrich is currently
operating in the Labrador area, so it's unlikely to be an Hawaii NAVTEX
transmission.

I also captured that message, not very high quality print, though, and not
enough to get a message header.

Most likely one of the Canadians, of course, based on the rig location.

4743. [REU] Navtex Logs from Warrington,ENG

Yahoo group: navtexdx (2013)
Date: 2013-01-09 09:51:30 UTC
From: Brian Martlew
Topic: 4252 Message: 4743

A good night for T/A signals.

For some reason the ntp client on my PC stopped working overnight and
the system clock started to drift badly so some of the times in the
log may be (are!) several minutes out.

Foristell, Missouri
Decided to check 490 kHz last night and was rewarded with a new one.
Strange, an 8 second delay between ID and message. Perhaps another
not copied message in the middle? Or were they waiting until their 0840
time slot?

Vernon,

Your station database is outdated. Archangelsk changed it's ID-letter from 01F to 20F quite some time ago. Latest version is available here:

<http://groups.yahoo.com/group/navtexdx/files/Navtex%20Software/YAND%20Navtex%20%20Decoder/>

You need yand_stations.text; also read the readme.txt file on how to update.

Regards - Dirk

Hi all,

Strong Canadians with perfect copy last night, no sign of San Juan or Miami. Saint John's received very early at 23:20 local.

Regards - Dirk

Hello Dirk,

There was a very good opening to Canada last night.
The upcoming night does look good as some Canadian NDB's are already strong.

73,
Roelof

4752. RNA - Navtex Novs Scotia

Yahoo group: navtexdx (2013)
Date: 2013-01-09 22:01:22 UTC
From: Vernon
Topic: 4752 Message: 4752

Good conditions last night with $20L ☐ Arkhangelsk logged for a new one. It appears that this is the first NA logging of this station for RNA users.

Date: 2013-01-10 09:56:27 UTC
From: Roelof Bakker
Topic: 4742 Message: 4753

Hello all,

Last night T/A propagation from Canada was truly smashing as far as NDB's are concerned.
NAVTEX was not bad either.

It seems that after a long spell of mediocre propagation the band really perks up.
Maybe there is really a "Midwinter Anomaly"!
I have logged a couple of NDB's that were last logged in the great 2009 / 2010 season.

Daily log:

```
20130109 1742 518 $03K SVK Kerkyra,GRC 1821

4755. Re: [REU] Log from Antwerp, BEL (> 1500Km)

Yahoo group: navtexdx (2013)
Date: 2013-01-10 16:13:49 UTC
From: DirkCL
Topic: 4043 Message: 4755

Hello all,

Interesting night! Boston was long time no see here, very strong signal from San Juan.
Let's hope conditions continue; the last weeks were a bit boring...

Regards - Dirk

4762. RNA Japan on 518!

Yahoo group: navtexdx (2013)
Date: 2013-01-12 08:00:00 UTC
From: Mark Ku7z
Topic: 4762 Message: 4762

Looks like I got a little prop to Japan on 518 Friday morning starting at 0927 utc. The raw log below shows one line at 09:16, the end of which has ZCZC KB03 indicating Kushiro Japan, its time block starts at 0940 utc though? It appears to be a weather warning message so I guess they can be transmitted anytime? That was all I got of it, with the next line in the log starting at 0927 utc, having missed the header ID, it speaks of the Kushiro Navtex area. This message falls into Yokohama's, $11I, time block. At 0930 NOJ in Kodiak came on and ran traffic till 0955 utc. So wasn't gonna see Kushiro in its normal block. I will let the program run and see if I get a repeat this morning.

Nice to see some prop getting better in that direction. It has been purty good the last couple of days to Canada's north and eastern areas for NDB's.

I think I know what that means! The sun has lots of spots, flux was up to 172, flares are picking up, and the Dst has that minus sign in front of the numbers again (-10). Something got stirred up and got us good conditions again for awhile I guess.

4768. Mangled reception from 1B, 490 KHz?

Yahoo group: navtexdx (2013)
Date: 2013-01-12 14:18:57 UTC
From: Jack Smith
Topic: 4768 Message: 4768

Couple of badly mangled 490 KHz messages received, but not 100%
identified. The one closest to intelligible print is below.

Message below is assumed to be 1B, Ostend BEL based upon language,
reference to Finisterre, and time of reception.

2E at Corsen, France? The schedule for 2E is 0440 and the message fragment with Finistere is 0437, but the geography certainly matches better, since I believe Finestere and Corsen are both in Brittany.

Hi Jack (and possibly others on the other side of the pond),

In Europe and on 490, 2E Corsen and 1T Niton are the only stations transmitting in french. Ostend transmits in dutch on 490.

Where 1T Niton's service area is the English Channel, Corsen services the Bay of Biscay and part of the Atlantic. Finisterre is located in the Bay of Biscay.

By the way, the Corsen transmitter is not located in Corsen, but on Ile d'Ouessant, a small island a few miles off the most western point of France.

Regards - Dirk

4772. Re: [REU] Log from Antwerp, BEL (> 1500Km)

Hi all,

The 4th night in a row with decent T/A. Somebody must have turned a switch somewhere:0)

Regards - Dirk

From: Joachim Rabe
Topic: 1191 Message: 4773

Hi list,

conditions seemed to be quite good last night.

In addition to some scrambled fragments from the US I logged the following:

```
Date UTC QRG ID Station ITU
-----------------------------------------------------
20130112 2200 518 $04M Simiutaq / Cape Farewell GRL
20130112 2220 518 $04O St John's NL, CAN
20130113 0327 518 $04U Yarmouth NS, CAN
20130113 0350 518 $04X Labrador NL, CAN
20130113 0400 518 $04A Miami FL, USA
20130113 0610 518 $04N Portsmouth / Chesapeake VA, USA
20130113 0636 518 $04Q Sydney NS, CAN
-----------------------------------------------------
```

73s

4774. Re: [navtexdx] NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-01-13 10:23:55 UTC
From: Roelof Bakker
Topic: 4742 Message: 4774

Hello all,

Excellent conditions continue.
Canadian NDB's were booming in yesterday evening and that shows in the NAVTEX log.
I found 4 decodes of Fundy, CAN NB at a stretch and also a good show of USA NAVTEX.

4775. Re: [REU] Log from Antwerp, BEL (> 1500Km)

Yahoo group: navtexdx (2013)
Date: 2013-01-13 10:37:17 UTC
From: DirkCL
Topic: 4043 Message: 4775

Hi all,

Very weird conditions! I finally could log 04M Simiutaq.
Strong Canadian signals, but... after ~00:00 utc, nothing was seen anymore from the East (Turkey,Greece,..). Even stranger, my "beacon in the night" Grindavik was totally absent in the logs. This has never happened before. (When I don't see Grindavik the logs, I start checking antennas and things :0)

Regards - Dirk

Hello Dirk,

I found that with the latest excellent conditions some stations are
canceled out completely.
I have seen this on NDB's in the 300 km range that are audible with equal
strength 24/7.
But also on Finnish NDB's in the 2000 km range.

So, this can also happen to NAVTEX and Iceland is about 2000 km away.

Conditions are very good indeed; I found this morning at 06:25 UTC NDB
YE-382, Fort Nelson, Canada, British Columbia, 6827 km away. This has only
happened once before and that was in November 2009.

So, it maybe not apparent, but conditions are amazing!

I wonder if the MW guys are experiencing the same.

73,
Roelof

Conditions yesterday where indeed quite interesting.

Of late, I have been copying the Greenland stations with good regularity when they manage to sneak in between breaks of the US and Canadian stations. No Europeans yet this winter however.

I took an hour and hunted around for NDB's and was quite surprised at the number I was hearing out to about the 2000km mark. Best copy was on NDB's to the north of my location up in northern Manitoba (YQ on 305 and YEK on 329 north of Manitoba) and several in Northern Quebec.

cheers, Graham ve3gtc FN25ig

4779. [REU] Navtex Logs from Warrington,ENG

Yahoo group: navtexdx (2013)
Date: 2013-01-14 08:26:23 UTC
From: Brian Martlew
Topic: 4252 Message: 4779

Rather odd conditions last night. Still very little getting through
from the Eastern Mediterranean with the exception of a small cluster
of Turkish stations. T/A reception seemed much more subdued than it
has been over the last few days with only the 'regular' Canadians
providing reliable decodes although a few fragments assumed to be from
Boston and Chesapeake were present in the raw logs.

4780. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-01-14 10:31:00 UTC
From: Roelof Bakker
Topic: 4742 Message: 4780

Hello all,

The NOAA Aurora Index increased to 7 yesterday and is now back to 4.
After 22:00 UTC yesterday, the Kyoto Dst dropped and was -26 at 08:00 UTC.
At the 10:00 UTC it was -22.

T/A propagation did not collapse completely, however the splendid
conditions of the past few days are now history.
Let us hope that the band will recover before too long.

Daily log:

4786. RNA More Japan on 518

Yahoo group: navtexdx (2013)
Date: 2013-01-16 18:01:56 UTC
From: Mark Ku7z
Topic: 4786 Message: 4786

Looks like both Otaru and Kushiro stations put in an appearance this morning. Looks like 2 messages from Otaru followed by a partial message from the NOJ Alaskan station at 1332, then at 1343 Kushiro popped in. Amazing propagation!

73, Mark, Ku7z

Hehe. Zero decodes here. I inadvertently let the rx tuned to 12579 overnight, and the band was dead as a dodo. ;0(

Regards - Dirk

4790. DsT = -43, Ki = 4...

Hi all,

A CME has ocurred, but although it is not directed to Earth, the effects
are visible.
Kp = 4 now, predicted to rise to 6, and the Dst has taken a dive.
Doesn't look good for propagation, but you never know :0)

DsT unit=nT UTC

Hello Dirk,

There is still some T/A propagation, but rather weak.

73,
Roelof

Hi to all,

is there anybody out there who had luck with qsl´ing Japan or China Navtex stations? I never got any reply, only Taiwan worked.

Hello all,

The effect of the CME does not seem to be immediate.
I had still a couple of Canadian decodes, though NMR, Puorto Rico did not
show up at all!

Hi Roelof,

Abbsolutely nothing here. The only noteworthy logging was Astrakhan.
Aah well...

Regards -Dirk

From: hans_juergen_karius
Topic: 4800 Message: 4800

properly anymore. The signals are weak as if the amplifier does not work. I did some measurements but haven't come to a solution yet and for outside work it is too cold with -5°C right now, brrr. My 2x40m dipole does not give interesting results on 490/518 kHz.

73 to all till I find the solution.

Hans, DL4YBP

Hi Hans,

Hope you can find the problem soon.
Internal condensation/icing perhaps?

73 - Dirk

4802. Very early Canadian T/A?

Hi all,

I just saw the fragment below in the log.
To my knowledge, the only stations regularly mentioning FUNK ISLAND BANK and NORTHERN/SOUTHEASTERN GRAND BANKS are St. John's and sometimes Sydney. The reception time of 20:12 local however, is extremely early for my QTH and unseen before. 04M Iqaluit sits in the 19:10 time slot but is only rarely received here so I don't have message statistics.

Anyone got more?

Regards - Dirk

Like you, I can't make head or tale of it.
It looks ike it is xed with Tallinn.

T/A reception of NDB's is very poor at the moment.
I only can here one from Newfoundland.

73,
Roelof

From: Roelof Bakker
Topic: 4742 Message: 4810

Hello all,

Conditions have recovered rather quick after the latest solar eruptions!
Joachim, I found Svalbard in three time slots!
Amazingly Bodo was only logged in the 08:00 UTC time slot, whilst
Archangelsk made it all night.

Propagation from he Arctic is excellent at the moment.
Maybe, Svalbard will turn up in the 12:00 UTC time slot

Hello Roelof

SEATTY printed it as:

<08:12:16> ZCZC BB57
<08:12:18> ZCZC 001 22 JANUARY 2013
<08:12:22> NAVTEX ALGIERSRADIO 2230GMT
<08:12:27>
<08:12:27> SPECIAL WEATHER FORECAST FOR ALGERIAN COASTS ISSUED BY METEO
<08:12:36> ALGIERS
<08:12:38> NEAR GALE TO GALE WARNING NR 009 ON TODAY JANUARY 22 2013

Regards, Wolfgang

Hello Wolfgang,

Thank you!

I have just rerun his message from my PERSEUS recording.
What happens is this.
In the scroll line, I see ZCZC BB57 and this is also displayed in the
message window.
Then 22 JANUARY 2013 shows up on the same line and when the message shifts
to the next line, BB57 changes to PP1!

2013-01-23 11:31:58> ZCZC PP1 22 JANUARY 2013
2013-01-23 11:32:03> NAVTEX ALGIERSRADIO 2230GMT

There is an interfering station in the background audible, so this is
probably the cause!

Best regards,
Roelof Bakker

Hi Wolfgang & Roelof,

I'm pretty sure those PP2 and PP1 messages were caused by operator or computer error. I received exact duplicates in the 00:10 and 04:10 time slots. Then, at 04:12, the header becomes BE28.

Regards - Dirk

From: Jack Smith
Topic: 4820 Message: 4820

Las Palmas made its first appearance ever for me early this AM - with decent print.

Also received a badly garbled message that may be from $12A, Ayora Equador based upon geographic name usage. This is also a new station for me, if it is $12A.

20130123 0401 490 $02A EAL Las Palmas,CNR 5739

Hi Dirk,

The following message is an example of the sort of thing I often get !

20130124 0325 518 $04O VON St.Johns,CAN 3690 !!!

2013-01-24 03:25:45> ZCZC RA42

2013-01-24 03:25:49> BROADCAST ON VHF-FM

2013-01-24 03:26:32>

2013-01-24 03:26:33> NNNN

This message is obviously from SAN JUAN and ST JOHN is a

town on one of the USV islands and is not in the database as a

Keyword for St. Johns, CAN.

I cannot get YaND to acknoledge this whatever I try !

Presumably I would have to do something on the database to correct this sort of problem.

Kind Regards

Bob, IOW

Hello all,

Good propagation from far up-north, logged Svalbard in 2 slots.
Good decodes from San Juan, only interrupted by strong locals.

Regards - Dirk

Bob,

Please understand. The ONLY situation where Yand will override an actually received header
(ZCZC RA42), is when it finds an ABSOLUTELY UNIQUE identifier for another station in the
message body.

"ST JOHN" is NOT a unique identifier for 04O St.John's in Yand's standard station database.
I must conclude you have messed things up yourself. There is no cure except manually
deleting the entire database and re-installing Yand...

Regards - Dirk

From: Roelof Bakker
Topic: 4043 Message: 4825

Hello Dirk,

This question has been laying around for long, but I never got round to ask.
When a station is labeled as an other station, I am not able to correct it by changing the letter of the header.
Can you look at this example:

20130124 0326 518 $04A NMA Miami,USA 7424
2013-01-24 03:26:47> ZCZC RA39
2013-01-24 03:26:52> CCGDSEVEN BNM 048-13
2013-01-24 03:27:02> GA AND FL - DOBOY SODNTONDERNAFDINA{}A - ST MARYS ENTR
2013-01-24 03:27:12> 1. ST [MARKS] ENTR RGE FRHNT~LT (LLNR 6525) IS REP
2013-01-24 03:27:24> EXTINGUISH. ALL MARINERS EXERCISE CAUTION WHILE TRANSITING AREA.
2013-01-24 03:27:25>
2013-01-24 03:27:31> 2. CANCEL AT //241542Z JAN 13//
2013-01-24 03:27:33>
2013-01-24 03:27:35> NNNN

It can be corrected manually in the log, but I have not found a way to do so in the log.

Thank you in advance!

Roelof

Hi Roelof,

Indeed. Yand will sometimes not let you enforce the ID-letter, but ONLY when it finds a globally unique identifier(GUI). In your message below, the only candidate is CCGDSEVEN. But...this keyword was deleted from the station table as a GUI quite a long time ago, because USCG messages are misrouted frequently as you know (your message below is a nice example). As a result, ANY station having CCGDSEVEN in the message text was identified as Miami. (the same applies for CCGDEIGHT,CCGDFIVE,etc..)

I have just double checked, and the database update in:
<http://users.telenet.be/NAVTEX/YAND/DB_UPDATE/>

does not list CCGDSEVEN as a GUI but as a normal geografical keyword, so it will only identify a station as Miami if the A identifier was received AND one or more of the listed keywords.

Another example of this behaviour is a message containing the text ISTANBUL TURK RADIO. No matter what you try (except going into the database directly), it will always show up as 3D Istanbul.

In short: you need to update your station database.
(but note that updating the station database will NOT automagically reprocess all your logs from the past)

Regards - Dirk

4832. Re: [navtexdx] Re: Station Identity Problem

Yahoo group: navtexdx (2013)
Date: 2013-01-25 21:18:01 UTC
From: bob.blodge@...
Topic: 70 Message: 4832

Hi Dirk,

I'm sorry, but I simply cannot understand this answer. I am not usually up at 3 oclock in the morning to mess about with the database, this is how it was when I went through the overnight log mid-morning.

Now, it may be that there is something wrong in my database, or even with something else in my system, but the number of tmes that this sort of thing happens is not really significant and your sugested cure is just a wee bit too much to cure an unimportant little glitch.

Why would it be necessary to re-install YaND ? The station database was up dated quite recently and ST JOHN is not in the keyword list for St Johns and everything else works as it should.

I will cary on, as is, and keep my fingers crossed !

All the Best

Bob

Bob,

Please understand. The ONLY situation where Yand will override an actually received header (ZCZC RA42), is when it finds an ABSOLUTELY UNIQUE identifier for another station in the message body.

"ST JOHN" is NOT a unique identifier for 04O St.John's in Yand's standard station database. I must conclude you have messed things up yourself. There is no cure except manually deleting the entire database and re-installing Yand...

Regards - Dirk

From: bob.blodge@...
Topic: 70 Message: 4833

Hi Dirk,

ST JOHN was, in fact, in the " Unique " Keyword list for St Johns but not

in the " Geographical " list, which is the only one that is displayed when

I start YaND, even though I have ticked both boxes.

Deleting this from the Unique list has allowed me to correctly display the

message.

I must remember to look at both lists when I get this problem.

Sorry to be a nuisance !

Regards

Bob

4845. 02P Porto Santo!

Yahoo group: navtexdx (2013)
Date: 2013-01-27 11:36:18 UTC
From: Joachim Rabe
Topic: 4842 Message: 4845

Too bad, my ALA100 was pointing 280° - i could see the transmission on my Perseus and SeaTTY decodes some garbled stuff but no reall message.

Hello Vincent,

I checked again on REU and it seems I made a mistake.

On REU, $02P is currently listed as Sao Vicente (Cape Verde Islands) but on **490** KHz.

Bill Hepburn lists 02P as
518 P CTQ MDR Porto Santo 33 04 -16 21 planned
and Sao Vicente as:
490 P D4A CPV São Vicente de Cape Verde 16 51 06 -25 00 18

So we indeed need a new entry in REU for 518 02P.

Regards - Dirk

Hi All,

Porto Santo is in the Yand Station list for 490 Khz but has only been

transmitting on 518 for a few days, always with the same " no messages"

message.

Presumably this is some sort of start-up proceedure.

Cheers

Bob IOW

Hello Dirk,

Nothing here!
I can see Portpatrick signing off and than a much weaker station starts,
but no decoding and within seconds Den Helder is blasting on the channel!

Hi list,

last night, $02P-Porto Santo MDR, was only logged here at 2230 UTC.
All other slots were occupied by $01P - Netherlands (Den Helder).
But at least it was in my log!

```
Date UTC QRG ID Station ITU
-------------------------------------------
20130127 2205 518 $09M Muscat OMA
20130127 2230 518 $02P Porto Santo MDR
20130128 0140 518 $20K Murmansk Radio RUS
-------------------------------------------
```

And the there was this funny test-message from Corsen (most likely):

```
<08:08:18> ZC AB21
<08:08:22>
<08:08:24>
<08:08:24> CECI EST UN MESSAGE DE OEST DU MODULIATEUR SAIT XH5112

Hello all,

The Kyoto Dt dropped to -53 in the night from Saturday to Sunday.
Last night it hovered around -20 and apparently this is enough to block
the path to Canada.
For T/A only NMR and OXI were logged.

This was last nights 2K+ activity:

Bahrein is not very frequent recently and Bandar Abbas was the only station

in the F timeslot that had any connection with " Gulf of Aden " which was

mentioned in the (not vey clear) message.

Grindavik and Saudanes seem to be the same station. Also had 3 good messages

(all the same) from Porto Santo.

>Grindavik and Saudanes seem to be the same station

No, they are different stations, Bob.

Grindavik (X) is located in the west of Iceland, and Saudanes (R) in the north-east. Both are remotely controlled from Reykjavik.

Regards - Dirk

> Grindavik and Saudanes seem to be the same station.

Hi Bob,

As Dirk pointed out they are definitely two separate transmitters.
From here they have quite different signal strengths and fading
patterns making it relatively easy for me to tell them apart. What
does seem to happen occasionally is for one transmitter to be used as
a backup for the other. Last night for example it appears as though
the Grindavik transmitter was being used for both the 'R' and 'X'
slots. However, when this happens it's usually made clear in the
message header.

Hello all,

T/A nil, Porto Santo could be logged again with a quite high SNR of ~70..75. It wouldn't surprise me if they notch down the transmitter in the future.

Regards - Dirk

Hi list,

I've been trying to log $2G - Tarifa, ESP on 518 kHz for ages but without any luck so far.
$01G - Cullercoats, ENG was always far too strong and always on time.
Yesterday evening at 2100 UTC, for whatever reason, Cullercoats didn't transmit at all!
And guess who made it into my log - Tarifa from spain with an almost flawless transmission.

Date UTC QRG ID Station ITU

Hi Dirk and Brian,

Yes, they do come on different time slots, X and R, but on my

logs it is confusing that they have the same 1951 Km distance.

I have never had any other distance determined !!

That was why I assumed that they were one station !

Cheers

Bob

From: bob.blodge@...
Topic: 4840 Message: 4866

Hi Dirk,

I have just looked at the database, and both of these stations are given the same

LAT and LONG positions !

Is this actually the location of Reykjavik ? My atlas is not really good enough to

locate these.

Regards

Bob

On 28 Jan 2013 at 21:09, DirkCL wrote:

>Grindavik and Saudanes seem to be the same station

No, they are different stations, Bob.

Grindavik (X) is located in the west of Iceland, and Saudanes (R) in the north-east. Both are remotely controlled from Reykjavik.

Regards - Dirk

Hi Bob,

You're right. I must have taken a shortcut when entering Saudanes into the database. (it doesn't make much of a difference from my QTH, ~ 80 km)

The location is Grindavik. Try the best atlas in the world: Google Earth! When you enter grindavik iceland, it will take you straight to Grindavik's huge antenna site. The grounding radials are visible from a height of 4 km.

Regards - Dirk

From: Roelof Bakker
Topic: 4252 Message: 4869

Hello all,

Conditions are just so, so at the moment.
Not only T/A reception is marginal, but the Middle East is also poor.
I used to have regular decodes from all three NAVTEX stations in Egypt.
At the moment I am glad when I have one!
And Bahrein should be classified now as rare!

Hi All,

If anyone is interested, there is a useful WebSite that will calculate Great

Circle distances between any 2 latitudes and longitudes :-

www.movable-type.co.uk/scripts/latlong.html

Using this, I found that Porto Santo was 1887 Km from home !

20130202 0630 518 $... Porto Santo,MDR 1887

2013-02-02 06:30:20> ZCZC PZ98

2013-02-02 06:30:23> PORTO SANTO

Hi Bob,

You can also download an excellent free program from this website, it's called
'QRB QTE', I've been using it for years, it's very useful, and will
also calculate
Locator Square to Locator Square as well:

http://www.kvalvaag.net/qrbqte/english.php

73 for now, Alan.

Hello all,

Conditions slightly improving, but due to severe weather on the Atlantic many off-schedule storm warnings from locals are hampering T/A reception.

Regards - Dirk

4886. NA-Navtex log from Foristell, MO

Yahoo group: navtexdx (2013)
Date: 2013-02-05 13:42:43 UTC
From: PalmerRD@...
Topic: 818 Message: 4886

Foristell, Missouri
Receiver: ICOM R-75
Antenna: Clifton Z1501, base up 25 foot, 10 foot whip
Software: SeaTTY 2.30
Generally poor conditions for Navtex lately. Only 11 stations last night.
Most of the maritime broadcasts are now missing to my area. Last night was somewhat interesting in that I had the best reception of Honolulu so far this year. A word of warning though as all $04 broadcasts are now sending
out a message pertaining to Hawaii so be careful when you log this one.

Date UTC freq call Location
2013-02-05 1000 518 $04M Simiutaq, Greenland
2013-02-05 1027 518 $12O Honolulu, Hawaii

Hello Roelof,

Strange. I could log a short but stable fragment of San Juan, inbetween strong local signals.

Regards - Dirk

From: Roelof Bakker
Topic: 437 Message: 4889

Hello Dirk,

I just checked my PERSEUS recording.
There was station on, but too weak for a proper decode.
So missing NMR was due to lack of propagation.
And we also had a local thunderstorm last night.

I can't remember thunderstorms in winter when I was young.
However, I lived 250 km north from my current location.
Did you have thunderstorms in winter in Belgium in the past?

73,
Roelof

Hi Roelof,

We had a severe thunderstorm (and a tornado!) last night over the west of Belgium, but this is very exceptional in winter.

Regards - Dirk

4891. Solar max of cycle 24 reached?

Yahoo group: navtexdx (2013)
Date: 2013-02-05 16:11:21 UTC
From: DirkCL
Topic: 4891 Message: 4891

From: <http://solarscience.msfc.nasa.gov/predict.shtml>

The current prediction for Sunspot Cycle 24 gives a smoothed sunspot number maximum of about 69 in the Fall of 2013. The smoothed sunspot number has already reached 67 (in February 2012)due to the strong peak in late 2011 so the official maximum will be at least this high and this late. We are currently over four years into Cycle 24. The current predicted and observed size makes this the smallest sunspot cycle since Cycle 14 which had a maximum of 64.2 in February of 1906.

Hi Vincent,

Indeed another case of spatially selective propagation.
I have observed it many times in the past when comparing my logs with that of a fellow navtex fan only 10 km away from my QTH.

Those 10 km can make the difference whether a station is received or not. Spooky.

Regards - Dirk

Hello Vincent,

Yes, conditions have been better lately.
However, in the 20:00 UTC and 00:00 UTC time slot, I had a pipe line to
Bodo.
In both slots seven impeccable decodes were received here!

Daily log:

20130206 1927 518 $01U ESA Talinn,EST 1560

This is the worst night ever for me. The "best" log is 1727 km (Alger).
Do I have to go see my equipment?

```
YYYYMMDD HHMM KHz ID CALL STATION,COUNTRY DIST (Km)

4902. Navtex from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-02-08 10:58:43 UTC
From: Roelof Bakker
Topic: 4252 Message: 4902

Hello all,

Last night I found a decode from Thunderbay, CAN, 6187 km:

20130208 0247 518 $04P XLJ895 Thunder Bay, ON,CAN 6187
2013-02-08 02:47:46> ZCZC PA70
2013-02-08 02:47:48> 508~248UTCI
2013-02-08 02:47:51> NOTSHIP M2382
2013-02-08 02:47:57> CAPE [BUTTON] [ISLANDS]- SCATARIE ISLAND
2013-02-08 02:48:00> CHART ~3~5~1
2013-02-08 02:48:01>
2013-02-08 02:48:07> SCATADI~ LL767 FOG SIGNAL REPOATED
2013-02-08 02:48:10> INOPEEATIVB.
2013-02-08 02:48:11> NNNN

However it was out of its own time slot, which seemed a bit suspicious.
In fact it was towards the end of he slot of VCO, Sydney, CAN.
So, I rerun it from my PERSEUS recording:

20130208 1056 518 $04Q VCO Sydney,CAN 4564
2013-02-08 10:56:35> ZCZC QA70
2013-02-08 10:56:38> 5080248UTCI
2013-02-08 10:56:40> NOTSHIP M2382
2013-02-08 10:56:46> CAPE BR~TON ISLAND JA SCATARI~ ISLAND
2013-02-08 10:56:49> CHART ~3~~~1
2013-02-08 10:56:50>
2013-02-08 10:56:56> SCATA~I~ LL767 FOG SIGNAL REPORTED
2013-02-08 10:56:59> INOPEDATIVB.
2013-02-08 10:57:00> NNNN

Which shows that the AR7030 is more DX minded than my PERSEUS!

Hi bob,

A village named Penalva exists in South Portugal, so i guess the message came from Monsanto??

Hi Dirk,

Yes, I found the lat/long of Penalva and since the message said" Penalva Radio " and

"Test Message " I wondered whether it was another station, hence the question mark !

It may be that the Monsanto name is going to be changed as it seems also to be the

name of a large commercial organisation.

We shall see !

Regards

Bob

4909. Re: [REU] Log from Antwerp, BEL (> 1500Km)

Yahoo group: navtexdx (2013)
Date: 2013-02-09 13:29:13 UTC
From: DirkCL
Topic: 4043 Message: 4909

Hello all,

T/A is baaaack!
Finally, after a long period of horrible conditions.
Anyone got more of the 2 UNIDs in the 04:00 time slot, presumably Canadian, but the time slot doesn't fit.

Regards - Dirk

4910. 09 Feb 2013 Log around 0400Z

Yahoo group: navtexdx (2013)
Date: 2013-02-09 15:03:48 UTC
From: Jack Smith
Topic: 4910 Message: 4910

Didn't catch header on the first Canadian transmissions due to Miami and second message header was garbled, but I did print most of the message beginning at 0408Z.

The geographical location "Anticosti" (at 04:11:09) is usually associated with $04J and $04Q.

Jack K8ZOA

4911. Navtex from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-02-09 15:55:00 UTC
From: Roelof Bakker
Topic: 4252 Message: 4911

Hello all,

I found unusual long strings of messages from Malta.
It dawned on me that probably Portpatrick was off, which was confirmed by
EJM:

Hi Roelof,

Indeed, and the same goes for the 3 complete messages from $04O St.John's we could both log.

>

Nello all,

Despite with Portpatrick still off, not much from over the pond.
However, a rare these days string of seven messages from Bahrein!

Daily log:

From: Roelof Bakker
Topic: 4252 Message: 4919

Hello all,

I found a string of 10 messages from Bodo in the 00:00 UTC time slot.
This indicates that propagation was favoring the north as in most cases
Bodo is overrun by Alger.

Portpatrick is still of, which results in a few nice decodes from VON.

Daily log:

4920. February Logs (so far)

Yahoo group: navtexdx (2013)
Date: 2013-02-11 18:00:25 UTC
From: Alan Gale
Topic: 4920 Message: 4920

Hi All,

Just trying to get my logs up to date so I'll know where I'm up to. Nice to catch Porto Santo fo the first time, plus a few Canadians, not a sign of anything from the US though. What a nice change not having Portpatrick blocking up the channel with the usual long winded messages, I wish that more of the UK stations would take a break from time to time:

```

4924. Transmitter idling on 518

Yahoo group: navtexdx (2013)
Date: 2013-02-12 21:49:28 UTC
From: Alan Gale
Topic: 4924 Message: 4924

Hi All,

A strong NAVTEX station has been 'idling' on 518 kHz for around the last 50 minutes or so, and this is making it difficult to hear any of the more distant signals. I suspect that it may be Valentia as it seemed to come on after their last Nav Warning, though I wouldn't swear to that. A number of stations seem to flatten it when they come on, but it's causing a nuisance to say the least.

I thought it was only Monsanto that did this sort of thing! :-D

73 for now, Alan.

Hello Alan,

It is S7 here, which is intermediate strong.
The bearing is (a coarse) north / south.

If it stays on, I won't here much DX!

73,
Roelof

>Roelof

Hi Roelof,

It's still on yet, I was hoping that if it was Valentia the lads at Malin might notice it when they made their broadcast and let them know, but they may not be monitoring the channel, just transmitting on it. Hopefully it will go off when their next transmission comes up, but that could be around 2340, which means much of the evening will be lost. I think it was an extra Gale warning at 2050 which stuck, but I wasn't really paying attention, so it could have been Niton at 2040.

Glad I'm not paying their electricity bill anyway!

73 for now, Alan.

4927. Logs Rotterdam 12/13 February 2013

Still a terrible reception. Noise is s5/s6 for the last weeks.

In the log two Sellia Marina's, ICI and ICH.

From: Jack Smith
Topic: 4929 Message: 4929

Interesting reception overnight - $03R La Maddalena. First time I've seen print from EU other than one of the Atlantic coast stations and signal was excellent.

Puerto Rico started 1 minute late at 0251, so the first 60 seconds was ungarbled.

Jack K8ZOA

Hi Roelof,

It went off somewhere between midnight and 0100, I suspect it was after a similar unscheduled 'WE' message from Valentia at 0049 that seemed to start it off at around 2050. Fingers crossed it doesn't happen again anytime soon.

73 for now, Alan.

Hello Alan,

The great thing about IQ recordings is that you can jump back in time.
Too bad it is still not possible to jump forward.
It should be nice to enjoy the next solar minimum of 2017 today!

The culprit was not transmitting from the Green Island, but from Northern Africa.

I have attached a PERSEUS screenshot showing what was going on.
The screen scrolls top down, so the latests part of the transmission is on upper side of the window.

The lower side is the idling TX, which stopped at 00:10:16 UTC.
After a short break the idling starts again, however this is the regular sync signal followed by a message of Alger Radio. As you will spot, the idling and sync signal are identical, which was also confirmed by the S-meter reading.

So my bearing was not too far off!

73,
Roelof

Hi Roelof,

Thanks for that info, I was surprised at just how strong the signal was here, but it may have been on earlier in the evening and just faded up here around the time I heard it. Well spotted though, you were bang on with your bearing.

Let's hope that they've sorted the problem out now, but if it should happen again at least we'll know how to e-mail and complain to! :-D

I do miss having a rotatable loop, I really need to get around to building myself a new one. The way this solar cycle is progressing we might be back at solar minimum conditions by 2015, some experts say we have already had the peak and are on the downside, but I think it is too early to tell yet. The last minimum was a good one though and it would be nice to have another lengthy one like that again.

Fingers crossed for some good propagation tonight and no carriers.

73 for now, Alan.

Hello Alan,

I have rejuvenated a defunct AL1530 with LZ1Aq's design, which can be
found here:

http://www.lz1aq.signacor.com/docs/wsml/wideband-active-sm-loop-antenna.htm

I have designed a suitable PCB and it does decent job.
It still needs some tweaking as the gain is a little too high.
Do you still have the metal loop of your AL1530?

73,
Roelof

Hello Alan,

Same thing happened here (northen Portugal) about a week ago, on that frequency. The strange thing is that later on the same happened on 490khz, whilst 519khz was free of interference and then it reversed again.

Not sure if that´s the case, but I gather that these navtex stations switch between the two frequencies. Is that right?

Cheers,

Paulo

Hello Paulo,

Dual channel Navtex transmitters exist; Nautel,Danphone and others offer them, but I'm unsure whether they are used much. At least a reliable automatic antenna tuner will be required to switch channels.

Hi Jack,
It may have to do with La Maddalena's rather high output power.
At 1200km from my QTH (and over a land path >90%) I can often receive it here around local noon.

But nevertheless: a nice catch from the Mediterranean!

> Puerto Rico started 1 minute late at 0251, so the first 60 seconds was

Hi Paulo,

I think that things have got a lot more complicated now that many use 'remote' transmitting sites, and a number of switching errors have been noted, where a station that should have been on 518 appeared on 490 or vice versa. I'm not sure how this occurs as I thought that many of these were controlled automatically, but with more stations now doing this I'm sure we will continue to see it happening from time to time.

I will contact my friend Finbar, who is also a NDB List member and was the former Chief Radio Officer at Malin Head and I'm sure he will know the answer for sure, I did visit the station in 2002, but it only had the one 518 kHz transmitter at that time.

73 for now, Alan.

Hi Roelof,

That sounds like a good idea, the LZ1AQ circuit looks like quite an interesting one. I do still have the metal Loop, in fact I now have two of them after inheriting one from a friend who went SK, that one was completely dead, but mine had just developed a very loud crackling noise, and even with new coax it was there, so probably just falling apart from old age (a bit like me) after about 12 years of service. They're both sitting here in the house at the moment waiting for me to get around to doing something with them, would you like one? :-D

73 for now, Alan.

Can anyone identify this transmission? The "No Messages on Hand" is typically Canadian, and the time slot matches $12D at Port Rupert, but I don't recall seeing the NR=/ESCO0425/13 format used in any of the No Messages on Hand transmissions before.

Hi Paulo,

I received an interesting reply from Finbar, and this might be of interest to other members as well. The auto ATU tuning could well be why we often hear an idling signal prior to the first message starting:

Regarding Navtex and 518 and or 490 khz, well the Malin Head Radio situation is thus. We have two transmitters, main and standby.

Both are set up for 518 and 490 khz transmission capability, or indeed other MF frequencies if ever required, in the future (but unlikely, as far as I know).

We use an ATU for the single big wire Tee antenna, strung between our two 150 foot towers (used to be use on 500 khz, years ago).

This ATU automatically switches from 518 khz to 490 khz tuning set up, when the transmitter switches from 518 to 490, on sked.

If a station were to transmit a 518 khz message on 490 khz, that would be, most probably, operator error, or software glitch, or visa versa.

If the transmitter were to transmit on 518 khz, but into an ATU setting for 490 khz, the rig would "see" a miss match and shut down, because of a high reverse VSWR and consequently protect itself, as it should. The same goes for a 490 khz transmission into an antenna tuned to 518 khz. This is unlikely, under normal circumstances to occur, since the control software would automatically set the ATU to the appropriate coil and capacitor selection, for a match.

I would be surprised if coast radio stations had a separate antenna for 518 and also for 490 khz. All, to my knowledge Navtex transmitter stations would be using their former 500 khz antenna and the set up would be similar to Malin Head, ie just one MF antenna, be it a Tee type, or a large vertical with several wires coming from the top of the tower in an umbrella fashion, and coming down about a third of the height, to insulators and then on down to ground blocks, being used as both loading wires to help bring the antenna to resonance near 518 etc, and also as top stays for the tower.

73 for now, Alan.

Hello Alan,

Regarding the loops, I have two defunct units here already.
One is for my own use, the other is meant to be exported to Belgium in due course.

At the moment I am building a IMD test set up.
When it is ready, I will build two LZ1AQ amplifiers and test them thoroughly.
If you like, I will ship one to you.

I bought 100 transistorsfor Euro 2 and thes appear to come from he same batch as they are all identical.
Which makes them ideal for a balanced amplifier.

73,
Roelof

Hi Vincent,

You seem to have an outdated database.
Sellia Marina has used the G-identifier back in 2011 for quite a long time, during the initial test phase of the station. I found this in my log:

From: Roelof Bakker
Topic: 4924 Message: 4949

Hello all,

Further to this thread of single antenna and 490 / 518 kHz usage. I have also seen one short dash on the mark or space frequency prior to the start of he transmission. I guess this is long enough to set up a automatic antenna tuner. Especially as it just has to sense the frequency and then kick in the stored settings.

73,
Roelof

>Roelof

Hi Roleof,

I would love to test one, so thank you for that offer, it would be a shame to waste the loops if they could be made to work with something else, and it would be interesting to see how they compare with the Wellbrook units.

I have just spent the afternoon and evening (finally) setting up my laptop with my little used NRD-525, Datong FL-3 and Datong AD370 aerial so that I now have a stand alone setup in the shack that can be left running on 518 or 490, so that should make life a lot easier now, and I can keep the 7030 free for other modes. The 525's filters were not really narrow enough for NDB chasing, but are ideal for this mode.

Portpatrick just came on at 2220, and it sent the short dash prior to starting its broadcast, funny how I'd never noticed that before until you mentioned it.

Thanks again and 73 for now,

Alan.

4952. Recent, latest logs +REU

Hello all,

The Kyoto Dst dropped to minus 45 yesterday.
This was immediately apparent by the absence of Bodo.
The Kyoto Dst has recovered and Bodo could be logged at last in the 08:00
UTC slot.

Hi Vincent,

Installing a new version of Yand and updating the station database are two separate things. Updating the database is done by uploading and importing the latest yand_stations.txt file

The installer will only install a (basic) database for a firsttime user, i.e. when the installer sees that no database is already present.

Best regards,

Dirk

Hi all,

I noticed that Haifa and Porto Santo are sometimes fighting each other. Last night, Porto Santo won. :0)

I also catched a long string of messages from Ismailia,EGY.

Regards - Dirk

Vincent,

Do the following:
- start yand
- goto database > click on "export station table to file"
- From Windows, browse to the Yand directory and mail me the file yand_stations.txt. I'll check what's wrong with it.

Best Regards - Dirk

Hello all,

Propagation from Canada has improved, as I found a couple of excellent decodes.

Hi Dirk,

That's some rig, a button for almost everything. I do like the dial display, best of both worlds there, a proper tuning dial and a nice visual display. at that price though I think it would also have to be able to make me a cup of coffee and a Bacon sandwich on demand as well! :-D

I was just looking at the brochure and specification on the Martin Lynch website, the sensitivity is 0.5uv between 130 and 522 kHz, so not bad for LF, but the sensitivity between 522 and 1705 kHz is restricted to 4uv. It would be nice to have a play with one and see just how well it would perform as a LF receiver though. I'll keep buying the Lottery tickets....

http://www.hamradio.co.uk/userfiles/file/TS_990.pdf

73 for now, Alan.

Hi Roleof,

Yes, it would be interesting to know just how many (or how few) of these sets they sell, unless of course they have customers outside of the hobby community where money is not a problem.

73 for now, Alan.

4975. Re: [navtexdx] 490 kHz Logs + one new one

Yahoo group: navtexdx (2013)
Date: 2013-02-19 15:53:46 UTC
From: Alan Gale
Topic: 4972 Message: 4975

Hi All,

One small correction, Port Santo on 490 is not a new one for me, I heard
it when it was active previously back in 2006. Good to hear it again though.

73 for now, Alan.

4976. Re: [navtexdx] [OT] Kenwood TS990

Yahoo group: navtexdx (2013)

From: Roelof Bakker
Topic: 4968 Message: 4976

Hello Alan,

I don't think that it will be sold in large quantities.
It was the same story with the once famous FT-ONE.

Even in my small town a few DX-ers have abandoned Yaesu-Icom-Kenwood in favor of a Elecraft K3.
Which also seems to be the transceiver of choice of most major DX-peditions.
A fully loaded K3 is not cheap, but it is still much cheaper than the top of the line units of the big three.
And regarding weight, it won't break your back.
It is also fully configurable and you can just buy what you need.

I won't buy one though, as I have little use for it.
I own a CW only Elecraft K2, which is also a fine rig, which does not see much use either.

Sorry for the OT!

73,
Roelof

Hi all,

Daily report 490/518, T/A nil.

Alger keeps messing up its headers, and in a very consistent way...

Regards - Dirk

Hello all,

My daily report from yesterday has been missing due to a break in the
decoding from 17:00 UTC onward on the 20th.
I did synchronize my PC clock around that time for runing WSPR on 477 kHz,
but I can't repeat the fault doing so.
Anyway last night all went well!

Hi All,

518 reception seens to be improving in the last couple of days.

I think that they have just put new batteries into the MALTA

transmitter ! It is some time since I had a message from this

station but a few nights ago I had a string of 10 quite readable

messages.

This was last night's collection of " over 2K ", the slightly doubtful

one was Bahrein.

20130222 1744 518 $03K SVK Kerkyra,GRC 2031

20130222 1836 518 $03P 4XO Haifa,ISR 3567

20130222 2048 518 $03F TAL Antalya,TUR 2966

20130222 2111 518 $03I TAN Izmir,TUR 2559

20130222 2152 518 $20L UGE Arkhangelsk,RUS 2836

20130222 2154 518 $03L SVL Limnos,GRC 2402

20130222 2202 518 $03M 5BA Cyprus,CYP 3235

20130222 2224 518 $03O 9HD Malta,MLT 2090

20130222 2357 518 $04C VCK Sept-Iles,CAN 4476

20130223 0020 518 $09B A9M Bahrein,BHR 5111 ??

20130223 0111 518 $03H SVH Irakleion,GRC 2751

20130223 0324 518 $04R NMR San Juan,PTR 6754

20130223 0352 518 $09X SUZ Ismailia,EGY 3544

20130223 0451 518 $04F NMF Boston,USA 5238

20130223 0636 518 $04Q VCO Sydney,CAN 4281

20130223 0406 518 $04A NMA Miami,USA 7120

Incidently, I don't know if anyone else has this strange

result, but many of the messages that I get from

ALGIERS, with very good reception, come with either

Q or W B1's and I have to change this to B !

Presumably the code for these alternatives is very

similar.

Cheers

Bob

4986. Logs Rotterdam 23/24 February 2013

Yahoo group: navtexdx (2013)
Date: 2013-02-24 17:09:21 UTC
From: Vincent Schriel
Topic: 4986 Message: 4986

I had some problems with my equipment in the last weeks. Reception of the BBC on 198 was terrible. Yesterday I replaced the coax cable. Problem solved.

From: DirkCL
Topic: 4043 Message: 4987

Hi all,

Stupid me, I left the Perseus on 4209.5 overnight!
On top of that, Istanbul Radio left their transmitter idling on Sitor-A sync all night, making any DX impossible. Yand will occasionally pull in sync, showing strings of RRRRRRRR or 44444444 characters.

Regards - Dirk

20130224 0602 4209.5 $03D TAH Istanbul,TUR 2133

Hi Vincent,

Nice to hear you've sorted out the problem!
A few weeks back, I decided to switch the whole shack from PL239 connectors to BNC. Wish I'd done this 20 years ago. It cost me just 25 euros for decent crimping/stripping tools.

Regards - Dirk

Hi Dirk,

yes i see this in the last years also, permanent transmission from
Istanbul Radio...

Hello Dirk,

I can only second that.
The crimp tool is not really critical, however this stripper is really
great, as in one go it strips the PVC / braid and inner conductor:

Knipex 16 60 05:

http://www.knipex.com/index.php?id=1216&L=2&page=art_detail&parentID=1363&groupID=1395&artID=21

Available at Reichelt under part number KN 16 60 05

Making cables is now a piece of cake!

I made a few cables for my test gear and found that on my spectrum
analyzer up to 1.5 GHz these were better than purchased professional
double shielded cables!

73,
Roelof

Hi roelof,

That's exactly the one I purchased. A great tool!

Regards -Dirk

4999. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-02-27 11:23:11 UTC
From: Roelof Bakker
Topic: 4742 Message: 4999

Hello all,

Looking at my overnight recording, I found that on the NDB front the regular Canadian NDB's from Newfoundland could be heard, albeit not overly strong. In the course of the night propagation deteriorated and on NAVTEX not a single T/A decode was found!

Topic: 4742 Message: 5002

Hello all,

This is the second night in a row that I did not find a single T/A decode,
almost:

2013-02-28 02:37:58> ~~~~~~{}IW TO
2013-02-28 02:38:04> MALGAREE~HAGBOUR~N NS 46 27N 061 07W.
2013-02-28 02:38:42> ALL 3`~3)`354-,`8558~~~~~,~{}

This tiny fragment is probably from VCO, Sydney, CAN NS as the time slot
fits and Malgaree Harbour is located on Nova Scotia!

Date: 2013-03-02 16:57:02 UTC
From: Roelof Bakker
Topic: 4742 Message: 5008

Hello all,

Yesterday, the Kyoto Dst did a dive to -59 at 11:00 UTC.
At 24:00 UTC it was still -46 and has slowly recovered since.

This has a great impact on T/A reception as none was found.
Northern propagation was also minimal as Archangelsk was completely missing and from Bodo just one scrambled decode emerged in the 04:00 UTC time slot.

I have been reading a few interesting articles on solar activity.
One stated that the maximum for the sun's northern hemisphere already occurred in 2012.
The southern hemisphere will peak later and this could result in another cycle with a double peak.
The bad news is that solar minimum is still a good time away.
The good news is that I hope that the double peak will be followed by a double dip.
That will give a prolonged period of low sunspot activity, just like happed with cycle 23 in 2009-2010.

Hi Roelof,

There is a very interesting video on this subject, which NASA have posted
on YouTube, well worth a watch:

http://www.youtube.com/watch?v=6j4bl57D_1U&feature=em-uploademail

"Something unexpected is happening on the sun. 2013
is supposed to be the year of Solar Max, but solar
activity is much lower than expected. At least one
leading forecaster expects the sun to rebound with
a double-peaked maximum later this year".

73 for now, Alan.

Hi Alan & all,

Interesting video, but I have my doubts. All predictions about the intensity and the duration of SC24 have been wrong so far, probably because weak cycles are rare. (IIRC the last weak cycle was SC14 in 1906). The sun is a complex beast...

Regards - Dirk

Hi Dirk,

Yes, I think we have more chance of picking the winning Lottery numbers
than predicting what the Sun will do, it's even more erratic than the
english weather.

I just hope we don't have to wait too long for the next Solar Minimum,
and that when it does come it's another long one like last time.

73 for now, Alan.

Hello Alan, Dirk,

Chris Trask has his own view, which is interesting as well:

>>>>>
The average sunspot count for February was 38, indicating that we may
be in the final decline for this cycle. The minimum between this cycle and
the next should occur around 2017 or 2018, which will then be followed by
two
more similarly low sunspot cycles and then a third with almost no activity
during a phase reversal.

A chart displaying the measured sunspot activity since the early 17th
century and my calculated prediction is available at:

http://www.home.earthlink.net/~christrask/Solar%20Activity%201600-2100.pdf

NASA has published an online article about this cycle, comparing the
measured sunspot count with one of their better predictions:

http://science.nasa.gov/science-news/science-at-nasa/2013/01mar_twinpeaks/

Seems they are now conceding that the expected second peak predicted for
May will very likely not occur. I've been saying that for some time now.

Hello all,

The Kyoto Dst rose to -15 yesterday at 17:00 UTC; but after 22:00 UTC it
went down again under -20, where it still is.
So, it it no surprise that last night did not show a single T/A decode!

This month issue of Radcom carries an excellent article on the subject.
It gives insight in what is going on and states a few possibilities for
what will happen next.
Best of all, it does not advertise any claims and stays away from the
minefield of overestimated predictions.
Highly recommended!

It can be downloaded here:

http://www.ndb.demon.nl/DXA/

as Solar Activity.

73,
Roelof

Hi Dirk,

I finally installed Yand 6.3 on my Dell netbook running windoz XP 32bit. After about 6-7 seconds it crashes the little netbook and I have to power it down and re-boot. Yand works flawlessly on two other PC's and a laptop here. What should I look for?

Hi Don,

I'm puzzled, you're the first ever to report this.
I don't own a netbook so I can't test anything here.

-What I find strange is that the whole system is going down too. It takes some program to accomplish that.
-Are there no error messages popping up at all?
-Do you get a blue screen?
-Or the black screen of death and a reboot?
-Or does the system just "hangs" and is irresponsive?

-What could give a clue is the following: start up Yand and immediately click on the System Log tab. There may be error messages in there giving a clue (and that you could maybe read in the 6..7 seconds before the crash)
- Also, in the 6..7 seconds period before the crash, what is the CPU-load Yand indicates?

-Windows' System Log and Application Log must certainly contain error messages with possibly more details.

Regards - Dirk

Hello Dirk, Don,

It would not run on mine as the screen size was not supported.

73,
Roelof

Thanks Roelof,

Don:

Yand's main window size is 878 pixels wide and 599 high. Can you check the specs of the notebook? (although it would surprise me that Windows would start up a program with an excessive window size. But you never know with MS)

From: ok_blessed
Topic: 5024 Message: 5024

Hello to Group,

I am Brand New to NavTex and am hoping that I'm in the right place.

I've played with HF WeatherFax via my Android App and Shortwave Receiver and was hoping to monitor NavTex the same method? I am landlocked here in Central Oklahoma..

Is there a beginners corner to get started with? It looks interesting..

Much Thanks

steve

Hi Dirk,

I guess Roelof is right - It just won't run on this netbook. Should be fast enough and enough memory. Yes, the black screen of death! Power down then power up. Not enough time to read the Sys file although the first couple of lines look OK (about 10 or more lines are there but I can't read them fast enough before the crash! LoL The main Yand panel looks OK as well until 6 or 7 seconds from program start. Nothing in the .ini file - I guess not enough time to write what Yand found.

Well, not everything is possible!! Thanks Dirk!

Hello all,

I found two decodes from VON just after local sunrise.
Which has not happened for a while!

5035. REU Navtex log from Whitley Bay

Yahoo group: navtexdx (2013)
Date: 2013-03-07 15:06:10 UTC
From: g3gms
Topic: 5035 Message: 5035

Hello All,

Renewing my interest in Navtex, here is my first log for a couple of years. All logs from distances greater than 1000km.

Congratulations and thanks to Dirk in providing a really friendly and easy to use decoder YaND. A leap forward from my previous NAVTEX logger.

Mike Thayne, g3gms

Hello Mike,

Yes, YaND is excellent, especially the ease of producing a log report.
Which saves a lot of work!
Propagation is just so, so at the moment, but I got an excellent decode
from VON, St Johns, before it was wiped out by PBK, Den Helder.

Hello Vincent,

An other switch mode power supply going awry.
Let us hope that the frequency changes a bit, so your reception will be restored on 518 kHz.

If I remember correct, you had trouble with reception on a mini-whip due to a local broadcast station.
I have developed a mini-whip that is a bit stronger in this regard.
If you like, I will sent you one for free to test it at your location.

73,
Roelof

The only one I didn't test is the one of the ALA.

From: Mark McCarthy
Topic: 5040 Message: 5040

Hi,

I cannot get YaND to install on my PC. Here is the log.
Any ideas? I do not see any problems with the permissions.

Regards,
Mark, KE7MSU

> 19:08:11 SYS: error while reading YaND.ini : Access is denied

Hello Marc,

Yand cannot access its ini-file, database,etc, this is fatal.
I guess you have standard User Access Control (UAC) settings.
This will not allow the user running Yand (including admins) to access anything under C:\program files (X86)\ (Ask Microsoft why)

You have 2 options:
1. disable UAC completely (this is the first thing I do after installing Vista/W7)
Start>control panel>user account settings> set slider completely down)

2. If you feel unsafe with (1), do the following:
- uninstall Yand the standard way,
- Re-install Yand in any directory NOT under Program Files(X86)
- The installer will give you the option to change the install path:
change the default path to C:\Whatever

Regards - Dirk

Hello Roelof,
Well done on your good copy of VON St Johns this morning. I managed to copy some of the message which I can identify from your RAW text, at the 0629utc times so thank you for that but obviously my copy is not good enough for YaND to recognise. Next time maybe it will be better.

5045. Help Please with logging

Yahoo group: navtexdx (2013)
Date: 2013-03-08 17:06:44 UTC
From: g3gms
Topic: 5045 Message: 5045

Hello All, Sorry to bother you but I would like help in trying to identify these 2 loggings made in YaND.
They look like P in time slot 0230 on 490khz, which in the schedule adds up to 2P Ribeira de Vinha, CPV.

The RAW logs attached appear to be good copy but my lack of language skills prevents me from making any judgement. I wonder if YaND has the same problem? Just trying to get to grips with all the UNID's I see in my logs.

Best regards,
Mike Thayne, g3gms

Hello Mike,

The language is modern Greek and the station is Kerkyra.

I hope this helps.

73,
Roelof

Hi Mike,

After a first-time installment of Yand, the station database is rather basic. To update, go to:

<http://groups.yahoo.com/group/navtexdx/files/Navtex%20Software/YAND%20Navtex%20%20Decoder/>

There, first read the readme.txt file for instructions, then download yand_stations.txt and proceed as explained in the instructions.

Make sure to UNcheck "only import station data"

Regards - Dirk

Hello Roelof and Dirk,

Roelof, Thank you for your help in identifying language and source.
Dirk, New YAND_STATIONS.TXT installed, thanks for your advice. Will run tonight and see what logs turn up instead of UNID's.

Best regards,
Mike, g3gms

5051. Navtex Logs for Warrington,ENG

Yahoo group: navtexdx (2013)
Date: 2013-03-09 12:45:41 UTC
From: Brian Martlew
Topic: 5051 Message: 5051

List night's logs for > 2000km. The only thing of note was $09X
Ismailia which is a relative rarity for me.

5054. Help with YaND Database

Yahoo group: navtexdx (2013)
Date: 2013-03-09 18:07:17 UTC
From: Gary Hinton
Topic: 5054 Message: 5054

Hello Group,

After years of listening to NDBs I thought it fun to try Navtex.

I downloaded and installed the latest version (6.3) of YaND and find it to be a very nice program. Thank you Dirk for providing it.

My problem is trying to delete the logs that are included in the distribution of YaND. When I go to the Database tab, select the "OLDER than selected date" with any date of 2013, check "Compact database afterwards" then Execute it tells me 4037 records were deleted. Then I exit YaND and restart. Looking at the "Log" tab I still see many log entries for 2011.

Also, the deleting of records say 4037 records were deleted yet when I look at the "Log" tab it says in the "Database Navigation" section "Deleted Records: 4586".

Is it not possible to start my Navtex journey with a clean log database?

About me - I am retired from a career in computer networking management and live in Ham Lake, Minnesota. Ham Lake is a northern suburb of the Twin Cities (Minneapolis & St. Paul). My station consist of a Perseus SDR, JRC NRD-545 and Icom R71A. My antennas are a 30 & 100 meter wires and Wellbrook ALA1530S+

73, Gary Hinton

Hi Gary,

The remaining records will (should) all be UNIDs; to get rid of these, check "Delete all UNIDs" and execute again.

This behaviour is by design, and was requested by many users because by blindingly deleting UNIDs, important not-yet-analysed DX records could be lost.

I have just checked - you never know with software :0) - and by doing so as explained above I ended up with zero records.

Regards - Dirk

5057. RE: [navtexdx] Re: Help with YaND Database

Yahoo group: navtexdx (2013)
Date: 2013-03-09 20:47:57 UTC
From: Gary Hinton
Topic: 5054 Message: 5057

Hi Dirk,

Okay, I followed your instructions and now see 4586 records have been deleted.

But, what I still do not understand is why when I restart YaND I still see entries in the Log tab?

And, when deleting with the compact option I would think the database file (YAND_DB.ABS) would be smaller. Still 4,225 KB large.

And why does the System Log tab still show 4586 records loaded?

20:35:09 SYS: startup...

20:35:09 SYS: OS version: 6.2 build 9200, Windows Version > Windows 7 BTW it is actually Windows 8

20:35:09 SYS: CPU's detected: 8

20:35:10 SYS: opening database...

20:35:10 DATABASE: Log table succesfully opened, 4586 records

20:35:10 DATABASE: Station table succesfully opened, 195 records

20:35:10 SYS: directory path= C:\Program Files (x86)\YaND\YaND.ini

20:35:10 MODEM: FCenter/Shift set to: 1023/170

20:35:11 AUDIO: using device "Microphone (2- Realtek High Def"

20:35:11 AUDIO: settings: PCM, 11025Hz, 16bit, 1024 samples/block

20:35:11 AUDIO: format supported, starting input.

20:35:11 AUDIO: WaveIn Open OK

20:35:11 NETW: Server listening on port 50123

Maybe this is by design, but I would think deleting records would free up space and eliminate records that were deleted.

73, Gary

Hi Gary,

My previous explanation was a bit incomplete I guess.
Most, if not all, database engines never physically delete records.
Instead, they flag the "deleted" record as free, i.e. available to be overwritten by new records. This is done for performance reasons: say you have a table with 1 million records, and wish to delete record nr. 10000, then 990000 records must be shifted upwards. Imagine the CPU load this would cause.

This is where the "Compact database afterwards" option comes in which will physically delete all selected records in ONE go.

Below is detailed how a test version of my database was completely cleared.

Start situation: 61831 records, 63045KB

Delete older then: "Today", Compact aftw.: checked, execute
-1092 records left (all are UNIDs), 1409KB
Then, "Delete all UNIDs" Compact aftw: !!CHECKED!!, execute
-0 records left, 257KB (indexes,structure data,station table)

I hope this has cleared up things for you.

The faulty OS detection will be fixed in a next release.
The problem is that Microsoft sometimes skips version numbers, making it dangerous to predict the number of the next OS release.
(nice to see though that Yand runs on W8!)

Regards - Dirk

5061. RE: [navtexdx] Re: Help with YaND Database

Yahoo group: navtexdx (2013)
Date: 2013-03-10 14:14:47 UTC
From: Gary Hinton
Topic: 5054 Message: 5061

>Hi Gary,

>My previous explanation was a bit incomplete I guess.
Hi Dirk,

Thank you for the explanation of how databases manage data. It makes sense.

Back to my original post and now I am even more confused than ever!!! I cannot seem to get rid of the 4586 records from 2011. I deleted records before 2013/03/01 and compacted the database. Restarted YaND and they are still there and the size is the same.

Next I deleted YAND_DB.ABS in the Windows YaND directory. Using the DBManager.exe tool I created a new YAND_DB.ABS. This file is 25 KB in size, GREAT! But when I open YaND I still have 4586 records from 2011. The manager tool also shows the records in the "Data" tab.

Maybe this makes sense to you - using the DBManager.exe tool and going to the "Export SQL" tab, checking the "Data" checkbox I see many "INSERT INTO NAVTEXLOG values." entries. Is this where the 2011 entries are coming from? Why are you doing this?

Best regards,

Gary

Hello Marc,

Yand cannot access its ini-file, database,etc, this is fatal.
I guess you have standard User Access Control (UAC) settings.
This will not allow the user running Yand (including admins) to access anything under C:\program files (X86)\ (Ask Microsoft why)

You have 2 options:
1. disable UAC completely (this is the first thing I do after installing Vista/W7)
Start>control panel>user account settings> set slider completely down)

2. If you feel unsafe with (1), do the following:
- uninstall Yand the standard way,
- Re-install Yand in any directory NOT under Program Files(X86)
- The installer will give you the option to change the install path:
change the default path to C:\Whatever

Regards - Dirk

>

Hello Gary,

Restarting Yand is not necessary for record deletion to have effect.

> Next I deleted YAND_DB.ABS in the Windows YaND directory. Using the
> DBManager.exe tool I created a new YAND_DB.ABS. This file is 25 KB >in size, GREAT!

Maybe not... Are you saying that you started from scratch?
That you have manually entered all table names, field names, field types, field lengths.
That you have created the indexes?

>But when I open YaND I still have 4586 records from 2011. The >manager tool also shows the records in the "Data" tab.
>

I must conclude that you have created the new database in a different directory than the one Yand is seeing. There's no way around it...

> Maybe this makes sense to you - using the DBManager.exe tool and going to the "Export SQL" tab, checking the "Data" checkbox I see many "INSERT INTO NAVTEXLOG values." entries. Is this where the 2011 entries are coming from? Why are you doing this?
>

Me?? I'm doing nothing at all. DBManager.exe was not written by me. It comes with the Absolute Database package, the database engine inside Yand.

Hi Dirk,

I saw this message and also gave #2 a try. This worked for me too!!!

I also used the database manager's SQL to create a clean database. I am going to use this solution.

There must be some interaction with Windows use of "Program Files (x86) -> YaND" and the " Users -> App Data -> Me -> Local Store -> Program Files (x86) -> YaND" where I found copies of the YaND databases and subdirectories. Installing in the Program Files (x86) directory gives me 4586 log entries without any way of deleting. Installing in C:/YaND provides an clean Log tab. Strange.....

See my post in Mark's post regarding other directories.

>Me?? I'm doing nothing at all. DBManager.exe was not written by me. It comes with the Absolute Database package, the database engine inside Yand.

Ok, that is fair. I should have said maybe there was something with YaND SQL. I do not know if you ship or create the database. I simply saw the following and was confused.

FYI - I used the "Create Table SQL below to create a new database", without the "INSERT.." stuff.

From the Export SQL tab of the database manager -

```
DROP TABLE NAVTEXLOG;
CREATE TABLE NAVTEXLOG (
UTCRECEIVED DATETIME,
FREQ INTEGER,
SIGQUAL FLOAT,
IDLETTER VARCHAR(1),
MSGTYPE VARCHAR(1),
MSGNUMBER VARCHAR(4),
NAVAREA SHORTINT,
STATION VARCHAR(75),
MSGTEXT MEMO,
DIST INTEGER,
PRIMARY KEY IDX_DT (UTCRECEIVED)
);
INSERT INTO NAVTEXLOG values ('2011-05-21 23:50:31', 518, 94, '?', '?', '?',
0, 'UNID', '23:49:35>
23:49:46> ~KAXAXMUHFH~II~~~BNUDDCY MGCHXM{}
23:49:51> AVURNAV TOULON 503/11

Ok, nice to hear this solved the problem.
Most likely microsoft has changed the rules again for W8.

Sorry for the late reply. It seems i've catched the flu and am now typing on the iPad in the bedroom

Mike,

it seems as if you caught the NAVTEX service from Jiloy/Baku, AZE, using the "R"-slot.
Mentioned here :
http://www.dxinfocentre.com/navtex.htm
and here
http://www.iho.int/mtg_docs/com_wg/CPRNW/WWNWS4/WWNWS4-3-2-XIII.pdf

Hi Mike,

That's a first! Never logged on REU.

Regards - Dirk

Hello Mike,

Congratulations with this nice catch.

Dirk, I have often noted that reception from the east in the part of the UK where Mike lives, is much better than here. It seems that the signal passes overhead!

73,
Roelof

Many thanks Joachim for your help, so it looks like $03R would be the correct ID for me to use.
Dirk can I add this to my YaND database?
Roelof thanks, you have an amazing path to CAN which often passes over my head!

73, Mike

5076. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-03-11 18:14:50 UTC
From: Roelof Bakker
Topic: 4742 Message: 5076

Hello Dirk,

I hope your flu is not too bad.
Each autumn, we are offered a free anti-flu injection.
I don't know if it helps, as I never had flu before or after!

Conditions are improving, as I found an excellent decode from VCO.

From: g3gms
Topic: 5062 Message: 5083

Hello Vincent,

Very many thanks for your help in determining the correct ID to use for my original UNID query. I struggled for ages trying to understand from the info given, it is all very confusing. Good job YaND takes care of most ID automatically.

73 de Mike g3gms

From: Dirk [mobile]
Topic: 4742 Message: 5084

Hi Roelof,

I'm allergic to flu injections, because of the chicken eggs that are used to produce the serum. I can eat eggs - in any form - without problems though.

Regards - Dirk

5087. NAVTEX logs from Whitley Bay ENG

Yahoo group: navtexdx (2013)
Date: 2013-03-13 17:09:51 UTC
From: g3gms
Topic: 5062 Message: 5087

Hello Vincent,

Thank you for sorting out my report from Baku.

I notice my previous reports from Mondolfo, ITA have shown up in YaND as being from $03A although the message header does say $03U so thanks again for spotting this for REU. Now I will be more watchful and try not to hinder your good work. It's all very clear in your REU Navtex Signal List.

73, Mike g3gms

Date: 2013-03-13 17:54:11 UTC
From: Roelof Bakker
Topic: 5062 Message: 5088

Hello Mike,

Interesting to note that you logged Bodo in the 04:00 time slot.
Not a trace of Bodo was found here, which is rather rare!

73,
Roelof

Hello Mike,

Thanks for your comments.

I do my best to keep our database as good as possible.

Thanks for your contribution and congrats for this new navtex station never report before on REU.

Hi all,

A long backlog. Slight signs of T/A and a string of perfect decodes from Ismailia, EGY.

The doctor's verdict was that I have a nasty cold, and not the flu.
Remedy: rest/lots of hot tea/cough sirop

Regards - Dirk

5092. Monsanto testing/adjusting transmitter power?

Yahoo group: navtexdx (2013)
Date: 2013-03-13 20:57:18 UTC
From: DirkCL
Topic: 5092 Message: 5092

All,

As DXers in Europe will have noticed, Monsanto Radio is requesting
assistance from Navtex users. A typical message looks like this:

2013-03-04 02:39:35 56> ZCZC RA74
2013-03-04 02:39:36 53> CENCOMAR
2013-03-04 02:39:41 53> NAVTEX 518.0KHZ TEST MESSAGE.
2013-03-04 02:39:45 48> THIS IS A TEXT MESSAGE.
2013-03-04 02:39:49 47> ALL STATIONS RECEIVING THIS
2013-03-04 02:39:52 47> NAVTEX MESSAGE ARE KINDLY
2013-03-04 02:39:57 56> REQUESTED TO COOPERATE WITH
2013-03-04 02:40:00 52> TESTS, REPORTING TO
2013-03-04 02:40:05 52> MRCC.LISBOA(AT)MARINHA.PT
2013-03-04 02:40:10 47> POSITION, NAVTEX MESSAGE [NUMBER]
2013-03-04 02:40:10 47> NNNN

Below is the 490KHz log from last night; pay attention to the SNR
numbers after the time stamps, and also note the ~7 minute time gap
inbetween the last test message and the first regular message

Test message GL84 has an average SNR of ~13,
Test message GL83 has an average SNR of ~20,(power adjustment? unsure)
[7 minute time gap to set TX power back to normal]
And then, suddenly, the SNR jumps up to 40..45 for the regular messages.

I think the Italian stations should do the same, all of them are using
way too much power...

Regards - Dirk

From: Vincent Schriel
Topic: 5093 Message: 5093

Since yesterday there are no more problems with QRM. I don't know the reason, suddenly it's gone.

It has nothing to do with Navtex, but on Tuesday I visited the transmitter site in Nauen, Germany. The story is written in Dutch but there are also pictures in the article an at the bottom of the page you find a link for all the photo's I made.
http://www.schriel.nl/evenementen/bezoek-aan-grossfunkstation-nauen-d/

I left the rx tuned to 12579kHz yesterday afternoon and was rewarded with good copy from both Guam and Boston. Conditions overnight were encouraging too with good reception from Canada and Muscat.

Hi Vincent,
QRM can be frustrating. I've had a similar experience about a year ago with S5 broadband noise bands from 300KHz to 2.5 KHz.
I was unable to D/F it with a portable, it came from everywhere. After a week or so, it suddenly disappeared. I guess it was injected in the mains??

Interesting, and what a beautifully preserved building! (Jugendstil/Art Nouveau?)

The rotating antenna is an engineering masterpiece.

Regards - Dirk

Hello all,

Propagation from the east was above average yesterday evening and looking
at the number of listeners that logged Oman it did not suffer from a
selective propagation path.
I also found four stations from Canada, which is rare in one night lately!

Hi Vincent,

Glad to hear your QRM is gone, hopefully for good. Very interesting article, I viewed it using Google Chrome, which offers to translate pages into english (or other languages) automatically. Quite an impressive setup, especially that antenna system, wouldn't mind of those myself, though I don't think the neighbours would be too happy. Must look out for that station, I've neglected shortwave broadcast stations for far too long. Thanks for sharing it with us.

73 for now, Alan.

Hello all,

Good copy from the Med and the Middle East, and last time I catched a full header from VON was Feb 9th.

Regards - Dirk

Hello Mike,

Muscat is long time no see here, nice catch, not even a tracefrom it here. But to give you an idea of what REALLY good conditions are, have a look at my log below from 2010, and especially the last two entries from 2009.

All the best - Dirk

Hello Dirk,

Thanks for sharing your great catches. Wow, your 2 Japan logs are certainly a special achievement and I can hope, one day maybe... Meanwhile I'll go for the challenge of getting your other catches!

Best regards,

Mike

5102. Pre-CLE NAVTEX log from Surrey, ENG

Yahoo group: navtexdx (2013)
Date: 2013-03-15 09:29:19 UTC
From: Brian Keyte
Topic: 5102 Message: 5102

We have a NAVTEX Listening Event coming over Easter Weekend
in conjunction with NDB List. (Further advice in a few days)

It's two years since the last NAVTEX CLE and I'm rather rusty - here are
the results of some limbering up on 518 and 490 kHz!

(Vincent: I discovered, too late, that I needed to update the YaND Station
data. I've manually entered the affected logs carefully - ones with no km
entry. Hope no problems for you.)

date UTC kHz ID Location km

From: g3gms
Topic: 5062 Message: 5104

Hello Vincent,

With careful checking against your REU Signal List I hope my logs today all have the correct ID assigned. YaND will need some updating to make it correct so that I dont have to do a manual intervention and make mistakes! Sorry for causing you troubles.

5106. Re: [navtexdx] Pre-CLE NAVTEX log from Surrey, ENG

Yahoo group: navtexdx (2013)
Date: 2013-03-15 23:40:22 UTC
From: Brian Keyte
Topic: 5102 Message: 5106

Whoops!

Mike T has spotted and kindly told me that two of my loggings were showing the wrong Station letter:

20130311 2321 518 $03A IQM Mondolfo,ITA 1309
This should be $03U IQM Mondolfo,ITA 1309

20130313 2335 518 $03G ICH Sellia Marina,ITA 1916
This should be $03V ICH Sellia Marina,ITA 1916

Sure enough, the raw decodes confirm those corrections.
It looks like my Station List in YaND may be more in need of updating than I thought.
I am investigating to see if there are other similar errors.

Apologies to Vincent.
Many thanks, Mike.

73
Brian

==========
Woops indeed...Apologies to all!
==========

I have finally found the reason why several users have reported persistent problems with the ID-letters of the Italian stations.

To make a long story short: the station database contained in the install package of version 6.3 is outdated/wrong, and applying an update by importing yand_stations.txt does not (can not) correct the problem.

I can easily compile a new installer package, but as it is (and should stay) , the installer will not overwrite the database if one is present already, as this would cause the loss of all your logs.

Also, the import routine for the station database update will (by design, for good reason) never delete stations, but only add new stations or change existing ones.

I have a problem at hand, and need a few days to think about a solution...

Sorry again,

Dirk

5110. Getting Started Help

Yahoo group: navtexdx (2013)
Date: 2013-03-16 19:14:23 UTC
From: Gary Hinton
Topic: 5110 Message: 5110

Hi Group,

Just getting started with NAVTEX and I could use a little help identifying a YaND UNID.

From this URL document - http://www.navcen.uscg.gov/pdf/gmdss/GMDSS.1-Circ.11.pdf

Canada Wiarton 44°20'.00N 081°10'.00W 300 H 0110,0510,0910,1310,1710,2110 English Operational

I think I copied Wiarton, Canada which should be within my reception capabilities.

My questions are ☐

The time slot says 0110 yet the log shows 0121.

Is there ☐slop☐ in the timeframes?

Maybe this is a second message from Wiarton?

Do you agree this is Wiarton?

The log entry ☐

20130313 0121 518 $00H UNID 0

Hi Gary,

I would tend to think that but it should have been "$04H". That's why
Yand gave it an UNID. Did you have other messages prior and after?

These stations can overrun their slots depending on the number and types
of messages. The letter after the "H" if I remember correctly is the
type of message. They are only meant for "local" reception.

Sometimes you will have messages you can not be sure about the correct
transmitter and even the same message content can be sent by other
stations.

Also bringing this to the attention of the group is good because maybe
someone else had a good copy at the same time to verify.

Gary,
Don't worry too much about time slots, they vary all over the place
depending
on weather and other factors.
Most certainly Wiarton.

5115. YaND 6.1/6.3: The Italian Problem...

Yahoo group: navtexdx (2013)
Date: 2013-03-17 09:38:46 UTC
From: DirkCL
Topic: 5115 Message: 5115

1. The problem

-Several users have reported that some Italian stations were identified with the wrong ID-letter (Sellia Marina as $03G where it should be $03V, Mondolfo as $03A where it should be $03U)

- Updating the station database with the latest yand_stations.txt does not solve the problem.

2. The cause

The installer packages YANDSETUP6_1.exe and YANDSETUP6_3.exe as available here in the Files section of the group both contain an outdated station database.

(Why haven't I noticed this before? Because my local copy of YANDSETUP6_3.exe here, which I test-installed several times to investigate the problem, contains a correct station database. How is this possible? A gaffe at my side no doubt. I must have recompiled a correct version, without also uploading this version to the group)

3. Who are affected?

-Only FIRST-TIME users of yand 6.1 and 6.3, i.e. a CLEAN install.

- Users who have upgraded from 5.x/6.0 to 6.1 or 6.3 should not be affected as far as I could reconstruct it. (caveat emptor applies, this is not easy stuff)

==========
Note: Re-installing Yand after an uninstall is NOT a clean install.
The uninstall process will NOT delete your database and other settings files.
This is intentionally and by design.
==========

4. The solution

After a clean install of Yand 6.1 or 6.3, AND after applying the latest station database update (via yand_stations.txt), the following mess ensues:

there are two 518 3G Sellia Marina entries (we must get rid of these)
there is one 518 3V Sellia Marina entry (this is the correct one)
there is one 518 3R La Maddalena entry (correct)

there is one 518 3A Mondolfo entry (we must get rid of this one)
there is one 518 3U Mondolfo entry (this is the correct one)

You can verify this by going to Yand's database tab, and scrolling through the list.

From within Yand it is not possible to delete the faulty entries, but with a trick they can be disabled, so that Yand will skip them during the identification process, and will use the remaining correct entries.

We must get rid of the 2 3G Sellia Marina entries and the 3A Mondolfo entry.

Do for each entry:
1. Make sure "Show Geographical Keywords" is checked
2. scroll down and click on the entry to be disabled => the Geographical Keywords are shown in the list in the middle.
3. Double-click on each keyword and confirm the deletion
4. Press Confirm Keyword list.
---
5. Select "Show Unique Keywords", and delete as above
6. Press Confirm Keyword list AGAIN.

You're done.

Note: all the above can be done in an easier way by using dbmanager.exe, but you need to know what you're doing. If you have never used dbmanager.exe before, then you may safely assume you don't know what you're doing. [:D]

Hi Gary,

There is some confusion about the correct naming of certain Canadian stations. Yand lists $04H as XMJ329 Prescott,ON,CAN (as per Alan Gale's database which I consider authoritative)

Bill Hepburn's website:
<http://www.dxinfocentre.com/navtex.htm#IV-A>
uses XMJ329 Prescott, ON (Wiarton)

Canadian users in the group have attended me in the past that the correct location for Presscott/Wiarton is in fact Ferndale.

Other examples are Riviere-au-Renard/Sept-Iles, Saint-John/Yarmouth

Anyway, Prescott/Wiarton/Ferndale is only rarely heard here, so Yand's keyword list is very incomplete, hence the UNID.

All the best - Dirk

5119. Re: [navtexdx] Re: Getting Started Help

Yahoo group: navtexdx (2013)
Date: 2013-03-17 15:56:22 UTC
From: Jack Smith
Topic: 5110 Message: 5119

I looked at 1541 messages from $04H / 518 KHz received this season ...43432 lines of message text, 27014 unique words. This is a bit misleading in that all the time/date information is treated as unique words running up the count and also making the analysis more complicated.

Extracted the messages from the Yand database and then ran a concordance program (kh_coder) to extract words and their frequency. Incidentally, the automatic query wizard feature of the database management program yields SQL queries that fail - missing = signs and missing ' ' single quotes around text to be matched.

After discarding non-place name words, numbers, fragments, and low frequency counts, I came up with the following list.

First is the word and then the number of times it appears.

The data should be associated by phrase not just word, such as "Detroit River" or "Lake Ontario" - there is a way to do that in kh_coder, but the methodology is a bit unclear on exactly how to extract the complete phrase.

Sample below seems to be typical of searching for "Detroit" in context. The @ symbols are spaces between words.

2012-08-29?@01:11:52?"?@DETROIT?@RIVER,?@~AKE?@...,?@...

Hi, Roelof,

I also logged the UNID and I thought it came from $01O Portpatrick.

Conditions the last two nights were not really special for me and all over sudden I logged a complete message from $04F Boston, MA, USA.
Strange!

Hello Roelof,

Re the $00o UNID.

Sure this is coming from Port Patrick GPK which has been having transmission problems this week.

The same message received here at 1020 and 1420utc yesterday 16th with a strong signal. GPK is only 279km from here and these UNID's occurred as the first message each time followed by the usual string of messages from GPK.

Congrats on your T/A hits I only managed to log VON although plenty of key T/A words caught in other messages at different times of the night but no other ID's.

73,
Mike T

Objet : ***CECI EST UN SPAM*** [navtexdx] Pre-CLE NAVTEX log from Surrey, ENG

We have a NAVTEX Listening Event coming over Easter Weekend
in conjunction with NDB List. (Further advice in a few days)

It's two years since the last NAVTEX CLE and I'm rather rusty - here are the results of some limbering up on 518 and 490 kHz!

(Vincent: I discovered, too late, that I needed to update the YaND Station data. I've manually entered the affected logs carefully - ones with no km entry. Hope no problems for you.)

5124. Re: YaND 6.1/6.3: The Italian Problem...

Yahoo group: navtexdx (2013)
Date: 2013-03-17 19:17:53 UTC
From: DirkCL
Topic: 5115 Message: 5124

Hi All,

A new installer for Yand 6.3 is available in the Files section of the group: YANDSETUP6_3D.EXE
(this version is identical to 6.3 but contains a correct station database)

See:

<http://groups.yahoo.com/group/navtexdx/files/Navtex%20Software/YAND%20N\avtex%20%20Decoder/>

Note that installing this version over an existing 6.1/6.3 version will NOT solve the "Italian problem"!

This version is intended for NEW users to get started with a correct station database.

Regards - Dirk

5125. Re: YaND 6.1/6.3: The Italian Problem...

Yahoo group: navtexdx (2013)

From: DirkCL
Topic: 5115 Message: 5125

Users who have used v6.1/6.3 only for a relatively short period, or users who have used it for a longer time, but do not care about their logs in Yand's log database, can start over with a clean slate the following way:

- uninstall Yand the standard way,
- delete the ../YAND directory and all contents entirely,
- Re-install the usual way with YANDSETUP6_3D.

Regards - Dirk

Hi Mauro,

Have you received DK7FC in Navtex (sitor-B) mode?

I catched him too last week, but in straight RTTY on 478.245 KHz
Baud: 50 Shift:75Hz Polarity: Inverted

Regards -Dirk

From: Roelof Bakker
Topic: 4742 Message: 5129

Hello Mike,

Thank you for solving the UNID mystery!

Things look rather grim at the moment.
The Aurora Index is a whopping 10, the highest figure possible.
I have not seen this for a long, long time.
The Kyoto Dst has further dropped and is now -114.
The K-index is 6 and the A-index is 43.

On an other note, Stefan, DK7FC is running a NAVTEX test on 475.250 kHz.
He can be copied with YaND.
The message is sent about each two minute.

73,
Roelof, pa0rdt

Hello Roelof,

Thanks for the tip about DK7FC on 475khz. Good signal received here using YaND decoder.

5133. RE: [navtexdx] Re: Getting Started Help

Yahoo group: navtexdx (2013)
Date: 2013-03-18 14:22:37 UTC
From: Gary Hinton
Topic: 5110 Message: 5133

I thank all that replied to my questions.

I was thinking of doing the upcoming CLE but with so many UNIDs and the need for a different low pass filter I think I will pass.

Thanks again,

Gary

From: navtexdx@yahoogroups.com [mailto:navtexdx@yahoogroups.com] On Behalf Of Jack Smith
Sent: Sunday, March 17, 2013 10:56 AM
To: navtexdx@yahoogroups.com
Subject: Re: [navtexdx] Re: Getting Started Help

I looked at 1541 messages from $04H / 518 KHz received this season ...43432 lines of message text, 27014 unique words. This is a bit misleading in that all the time/date information is treated as unique words running up the count and also making the analysis more complicated.

Extracted the messages from the Yand database and then ran a concordance program (kh_coder) to extract words and their frequency. Incidentally, the automatic query wizard feature of the database management program yields SQL queries that fail - missing = signs and missing ' ' single quotes around text to be matched.

After discarding non-place name words, numbers, fragments, and low frequency counts, I came up with the following list.

First is the word and then the number of times it appears.

The data should be associated by phrase not just word, such as "Detroit River" or "Lake Ontario" - there is a way to do that in kh_coder, but the methodology is a bit unclear on exactly how to extract the complete phrase.

Sample below seems to be typical of searching for "Detroit" in context. The @ symbols are spaces between words.

Hi Gary,

There is some confusion about the correct naming of certain Canadian stations. Yand lists $04H as XMJ329 Prescott,ON,CAN (as per Alan Gale's database which I consider authoritative)

Bill Hepburn's website:
<http://www.dxinfocentre.com/navtex.htm#IV-A>
uses XMJ329 Prescott, ON (Wiarton)

Canadian users in the group have attended me in the past that the correct location for Presscott/Wiarton is in fact Ferndale.

Other examples are Riviere-au-Renard/Sept-Iles, Saint-John/Yarmouth

Anyway, Prescott/Wiarton/Ferndale is only rarely heard here, so Yand's keyword list is very incomplete, hence the UNID.

All the best - Dirk

Hello Dirk,

I have followed your advice and did the uninstal of old version and installed 6_3D successfully.

All seems to be working well and I will run again tonight live and enjoy the improvement.

Best regards,
Mike

5136. Cyprus Turkish Radio again

Yahoo group: navtexdx (2013)
Date: 2013-03-18 21:16:45 UTC
From: DirkCL
Topic: 4023 Message: 5136

Hi all,

For those new to Navtex, messages signed with "Cyprus Turkish Radio" are not originating from the regular $03M 5BA Cyprus station, but from a illegal station operated by Turkey, with unknown location.

I could not catch the header, but the station has used X or even the E from 03E Samsun in the past. It just comes and goes.

Turkey has been lobbying over the years at the WMO to get permission for a Turkish Navtex station to cover Cyprus but this was refused by the WMO each time.

Regards - Dirk

Hello Joachim,

Well done. I checked my log and found Monsanto pounding away here so no chance on this occasion for me to repeat my previous catch.

It's looking to me that directional antennas are going to be needed to overcome local "pests".

Thanks, Mike,

during the 2250 UTC slot over here Baku indeed was fighting with Monsanto but was a little stronger whereas during the 0250 UTC slot Monsanto was drowning any other station.
At least this time the wormhole ended in my backyard.

Hello Joachim,

Well done. I checked my log and found Monsanto pounding away here so no chance on this occasion for me to repeat my previous catch.

It's looking to me that directional antennas are going to be needed to overcome local "pests".

5146. AW: [navtexdx] Cyprus Turkish Radio again

Yahoo group: navtexdx (2013)
Date: 2013-03-19 18:15:02 UTC
From: Joachim Rabe
Topic: 4023 Message: 5146

Thanks Dirk,

just double checked my log and found $03... Cyprus Turkish Radio in my log, also without the header.

73s

Joachim Rabe

Von: navtexdx@yahoogroups.com [mailto:navtexdx@yahoogroups.com] Im Auftrag von DirkCL
Gesendet: Montag, 18. März 2013 22:17
An: navtexdx@yahoogroups.com
Betreff: [navtexdx] Cyprus Turkish Radio again

Hi all,

For those new to Navtex, messages signed with "Cyprus Turkish Radio" are not originating from the regular $03M 5BA Cyprus station, but from a illegal station operated by Turkey, with unknown location.

I could not catch the header, but the station has used X or even the E from 03E Samsun in the past. It just comes and goes.

Turkey has been lobbying over the years at the WMO to get permission for a Turkish Navtex station to cover Cyprus but this was refused by the WMO each time.

Regards - Dirk

Hi Joachim & all,

I checked again. All decodes from Monsanto were 100 faultless in my log, except the one below aroung 02:52:17. Yand even lost sync for ~15 seconds, with SNR holding steady, a sure sign of another station breaking in.

Regards - Dirk

From: Brian Martlew
Topic: 5067 Message: 5149

Logs for >2000 km. Despite good conditions to the Black Sea and
Caspian Sea still no sign of Baku here with Monsanto continuing to
dominate the slot.

5150. NAVTEX logs from Whitley Bay ENG

Yahoo group: navtexdx (2013)
Date: 2013-03-20 10:02:20 UTC
From: g3gms
Topic: 5062 Message: 5150

BAKU again for me,with 2 messages, then Monsanto came up out of QSB to drown the rest. YaND shows RAW log from Baku as $00R.

Hi Mike,

You seem to be in a sweet spot for reception of Baku!

The major part of the Alger message below is from Bodo,NOR and only the last lines come from Alger. In case you don't know already, Yand will stop its id-process on the first match it finds, in this case 'B' + 'ALGERIAN' instead of 'B' + 'NORWEGIAN'. Nothing is perfect.

Regards - Dirk

From: g3gms
Topic: 5062 Message: 5153

Hi Dirk,

Thanks for that info arising from the cross over (or snatching)between Algiers and Bodo. I can see what you mean and I suppose the logging stands correct or indeed it could be for either?

I appreciate your comments, this is why I include sending my RAW logs with my reports, just in case I get things wrong and somebody helps me to spot it.

Best regards
Mike, g3gms

Hi Mike,

You have effectively received both stations, with the ZCZC coming from Bodo, and NNNN from Alger. :0)
The choice is all yours. If you feel Alger is the more "exotic" station, leave it as is.

Regards - Dirk

5155. NAVTEX CLE168 - EARLY ADVICE

Yahoo group: navtexdx (2013)
Date: 2013-03-21 10:01:07 UTC
From: Brian Keyte
Topic: 5155 Message: 5155

Hi all

Our sixth Navtex Co-ordinated Listening Event is only a week away.
The fifth Navtex Event (CLE141) was in March 2011.

Days: Thursday 28th March - Tuesday 2nd April
Times: Start and end at midday, your local time
QRG: 490kHz , 518 kHz, 424 kHz, 4209.5 kHz
(plus other HF frequencies (6314, 8416.5, 12579, 16806.5 .. .)

We are again adding the extra 24 hours at the start, and at the end,
to help us to cover the different frequencies adequately.

Newcomers to Navtex are very welcome to join in - my simple Introduction
to get you started is below. For the much better FULL DETAILS AND ADVICE
go to our info page (http://www.ndblist.info/) and select the box to visit
the Datamodes Section or direct to http://www.ndblist.info/datamodes.htm
All the Navtex information is in the lower part there:
Details are given of several good decoders which are freely available
including Dirk's excellent YaND and the SeaTTY decoder which can
be used without charge for a trial period. Alan's comprehensive
WORLD NAVTEX DATABASE has recently been updated.
Members' Navtex reports are included in REU/RNA/RWW, also reached
via http://www.ndblist.info/

Please look out for the Final Details about three days before the CLE
starts. It will include important advice about log making, etc.

This Listening Event is for the NDB List AND the Navtexdx List.
The advice is going to both Lists, and so will my 'Final Details' and the
Combined Results after the event, etc.
If you are a Member of Navtexdx, please continue to post to that list.
If you are ONLY a Member of NDB List please post any NAVTEX CLE logs
to NDB List (including any trial sessions before the CLE).

Whichever List(s) you belong to, do give the event a try. Many NDB List
members have 'discovered' the NAVTEX mode from our five earlier CLEs
and found it fascinating. Any Navtexdx members who haven't taken part
in a CLE before can discover the value of comparing their results with the
rest of us - in a constructive, non-competitive way!

Good Navtexing
Brian

NAVTEX - A SIMPLE INTRODUCTION

The worldwide NAVTEX system transmits navigational and meteorological warnings and forecasts and urgent marine safety information to ships. It provides a fascinating variation on our hobby, needing all the usual skills with receivers and aerials and knowledge of different propagation conditions, but adding some good DX reception, interesting navigational messages and the ability to leave your receiver and PC 'listening all night' while you are fast asleep! These short notes are just intended to GET YOU STARTED, taking some of the initial mystery out of Navtex and Decoding, explaining as simply as possible how to receive your first stations, how to identify them and how to report your loggings.

1. TUNING TO A NAVTEX SIGNAL Set your receiver to show 516.30 kHz on the dial for 518 kHz (or 488.3 for 490 kHz) with USB setting and a wide filter, such as 2 kHz (Or, with CW setting, set your receiver to the actual Navtex frequency and the BFO to +1.7 kHz).
You should occasionally hear the background noise replaced by the warbling sounds of a Navtex signal.

2. GETTING SIGNALS TO YOUR PC Make an audio connection from the receiver to the PC sound card input. It's best to use the more professional advice about how to do that, but I just take a length of co-ax from the two terminals of one side of some primitive headphones direct to the PC's line input socket. You should be able to hear the signal in the speakers by adjusting the PC volume control settings (playback and/or recording). If necessary you could use the microphone input socket, but it is important to AVOID OVERLOAD which could damage the sound card.

3. INSTALLING A DECODER PROGRAM A decoder program (see the Navtex section in the Website) is easily installed in your PC - just follow the advice. When you have succeeded with your first decodes we recommend using YaND, which has many features designed specially for our needs.

As a very simple 'starter' though, I recommend the Frisnit decoder - just save the small 'navtex.exe' file, then double click on it. With a 1700 Hz setting on the display, in no time you will see the incoming messages.

Then move on to YaND, which identifies the received Stations for you, helps you to set up your log in the right format for REU/RNA, etc. and has many extra features.
Alternatively, SeaTTY is also a very good decoder with some extra features. It is quite easy to install and use and its 30-day trial is free of charge.

4. RECOGNISING THE STATIONS You will find that most Navtex messages start with 'ZCZC' and end with NNNN. The ZCZC is followed by two letters and two numbers - e.g. OA12. The first letter gives you a good idea which Station you have received and it tells you the times of day, 4 hours apart, when that station is likely to transmit. Most of the 'O' stations transmit starting at 02:20, then 06:20, 10:20, etc. The World is split into Navtex areas and there is often only one Navtex station using each letter in each area. In North West Europe (Area 01) an 'O' station heard on 518 kHz is likely to be Portpatrick in Scotland, but it might be from Malta (Area 03)

or even St Johns, Newfoundland (in Area 04). The actual messages should remove any doubt about which of the possible stations it is - the messages may include the Station Name (e.g. 'MALTA RADIO'), or the Navtex Area Number or geographical references, latitude/longitude, etc.
The second letter (A) shows what kind of message it is and the rest provides a message number.

5. STATION IDENTS We use our own way of identifying each station in our logs and station lists. It always starts with a '$' which means 'this is a Navtex Station' and it allows us to include these stations in lists with the other kinds of beacons in the Rxx database, etc. Immediately after the $ comes the two-digit Area Number (most of the eastern part of N.America is area 04). Last comes the Station Letter - an important part which provides the main 'key' to the station sending the message. So the 'O' station above would be $01O if Portpatrick, $03O if Malta and $04O if St Johns. You can find lists of the Navtex stations and the times they transmit from Alan's World Database in the Navtex Section of the Website and in Rxx.

YaND automatically works out for you everything in 4. and 5. above!

IMPORTANT: However, WHICHEVER decoder you use it is important to CHECK ALL YOUR LOG ENTRIES. Make sure that each decoded message shows the as-transmitted Station letter and that each message contains text confirming the identity of the Station you are showing.

6. OVER TO YOU! You can sit and watch the messages arriving or just leave your receiver and decoder program running overnight, then look through the messages afterwards to see what you have caught.
Enjoy!

5158. Re: Monsanto testing/adjusting transmitter power?

Yahoo group: navtexdx (2013)
Date: 2013-03-21 15:06:08 UTC
From: Mauricio
Topic: 5092 Message: 5158

I have received today a letter from the "Centro de Comunicaçoes, de Dados e de Cifra da Marinha" as reply to my reception report about this test. Mr. Carlos Alberto Pereira explains me that the test transmissions (10 minutes before the regular broadcast) are coming from the NEW Navtex tx. equipment installed at the site called CCDCM-LTX Penalva (Lisbon) with a power of 1000w. while the transmissions at scheduled times are coming from Monsanto Radio (CCDCM-CTX Monsanto) with 300w.

73!

Hello Mike,

Nice to see that you logged Bahrein.
Not a shred of it here!

The Kyoto Dst dipped again last night to -64 so we are still in troubled
waters.

Hello,

In preparing for the coming CLE, today I checked out 16806.5khz and obtained the following 5 logs.

Please can anyone confirm that I have the ID details correct, the messages are fragmented but sufficient text to help?

73, Mike g3gms

5161. New active antenna

Yahoo group: navtexdx (2013)
Date: 2013-03-21 19:40:02 UTC
From: R.Connolly
Topic: 5161 Message: 5161

Hi

I have just been made aware of a new active antenna that the UK based company Cross Country Wireless has started to produce. Coverage is from 100 kHz to 50 MHz with the head unit using a small dipole of stainless steel elements. I have looked at their website and it shows several images and my first impression is that the head unit looks very similar to the AD370 that used to be produced by Datong, one of which I currently of course use. The base unit is however different to the AD370 one and does not appear to have a switchable pre-amp. One of my fellow Radio User magazine columnists is currently evaluating one of these antennas and I am advised that it is hoped that his review will appear in the May edition of RU. The following link takes you to the item description, www.crosscountrywireless.net/active_antenna.html. Interestingly the manual recommends using it horizontally at frequencies under 10 MHz and vertically above that frequency but my experience of the AD370, and its manual, would indicate that using it in the horizontal position would make it a directional antenna rather than omnidirectional.

Topic: 5160 Message: 5162

Hi Mike,

Yes, this $04F Boston.
On HF, many USCG stations re-broadcast warnings & other info from all over the world.
This can be confusing - see the mentioning of Brazil in your raw logs.
In general, HF USCG transmissions start very accurately on time.
Many of them send a RYRYRYRYRY CQ CQ message 15 minutes before the start of the actual broadcast.

5170. Rx Setting YaND

Yahoo group: navtexdx (2013)
Date: 2013-03-23 19:54:54 UTC
From: Steve
Topic: 4043 Message: 5170

With an NDB signal fairly close to 518 I'm wondering if I can put the receiver into CW mode and use a narrower (500Hz) filter? If so, what offset should be used in this configuration?

Thanks

Steve

Hi Steve!

The useful bandwidth of a Navtex signal is ~350Hz, so 500 Hz is fine.
The offset is not critical at all; anything around 1 KHz should work fine with all decoders.

Regards - Dirk

Thanks Dirk...will try 517 and 500Hz filter.

Is there a tutorial anywhere that you are aware of for the newest version of YaND?

When I open and run the program and go to the LOG page I see a long list of loggings...not sure what these are from or if they should be deleted?

Also not sure how a station is actually logged (saved) into the log or is this done automatically once the station is properly synced?

Steve

Hi Steve,

- I plead guilty. No manual yet for the latest versions of Yand.

-The loggings you see are mine. This done to get a new user the chance to play around with the log. Feel free to delete them.

-Loggings are entered into the log automatically after reception of the final NNNN line of a message.

Regards - Dirk

Hello Dirk,

I found two messages from Qusair at that time and also Bahrein a bit
earlier.

Hartmut, nice to see China coming in once more.
I was away from home today, visiting a large radio flea market and family.
So no receiver running at the time.

Purchased an immaculate Tektronix 2445B four channel 200 MHz oscilloscope
at a fait proce.
So, that's my catch for today!

Hi Joachim,

The language is certainly Portuguese, so I guess this must be an off-schedule transmission from Monsanto?

5183. YaND Decodes...

Yahoo group: navtexdx (2013)
Date: 2013-03-24 18:44:30 UTC
From: Steve
Topic: 4043 Message: 5183

...or lack of them :-)

Last night I let YaND run on 518 but saw only 4 positive ID's from stations in Oregon and Alaska. Checking the text from the decoded stations shows a very low % (maybe 10-20% at best) of actual copy even though these signals are very strong. I have beeen running with AUTOTUNING and from looking at the Spectrum display, tuning appears to be synced OK on the two tones, around mid-screen. INput levels appear around midscale and SNR usually reads fairly high. I think I am also seeing a drop in data from unshifting / shifting on space as I often see a string of letters when I know they should be numbers. I have played with the signal calibration, which seems to swing fairly wildly even on strong signals as well as changed the sampling rate but I see no improvement. I suspect that I am still doing something incorrectly...or perhaps my laptop's soundcard (WinXP platform) is not stable enough?? I know that these signals are strong enough that copy should be 100% but such is not the case. Any more hints out there??

Steve

> out there??

Hi Steve,

The reason that a calibration function was added to Yand many versions ago was my Dell Latitude laptop...

Yand was developed on a desktop and ran fine on that machine. Then I installed it on the Dell (XP) and guess what? 80% garbled text, as you describe, even for my local S9+30 flame thrower Ostend.

Many laptops have crappy sound cards. My Dell had a 3% sampling rate error! This is disastrous for signal timing. You need to calibrate the sound card.

You need to have a stable signal to do the calibration. I you cannot do this with live signals, you can use the file calibrationsignal.wav located in the yand directory. But, if you play that file with Windows Media Player, you will not be able to select the player as Yand's sound input because WMP will send its output straight to the speakers and will not make itself available as a sound source for other applications. (Ask Microsoft why)

The easiest way to circumvent this, is to connect the headphone output to the line-in or microphone input, any cable will do.
Then select that input in Yand.

The needle of the calibration gauge should be stable and centered.
First try it manually, if you can't find a stable point, try the autocal function.

Regards % success - Dirk

Great website! I especially liked the 1929 TNT transmitter project, and the crystal radio section: this brought back memories of my father soldering together my first crystal radio. I must have been 10..11 years old or so.

Thanks Dirk...I will give that a shot. Does YaND remember the calibration once shutdown and started again or is this something that would need to be done each time?

Hello Steve,

On the Signal/Calibration tab you will find a knob called SAFE FACTOR.
Just click on it after calibration and you are done.

I have calibrated it only once and after a couple of month it is still
spot on.

73,
Roelof

Thanks Roelof / Dirk

I patched the calibration signal into YaND and noted the same performance on the calibration meter...swinging left / right. On AUTO calibrate it somewhat settled in the green region but unless I hit 'SAVE' at that point it would swing out again. The decoded test signal is still around 10-20% max. Somewhat troubling are the SCOPE patterns ...even when the input signals are completely removed from YaND and the INPUT level meter is showing '0', I can see active scope patterns on all of the different options which certainly doesn't sound right! Maybe the soundcard is noisy or flaky or...?? I would have expected a 100% decode on the test signal so something is messed-up it seems. I believe the soundcard in my old Win98 Toshiba is better but YaND will not run on that computer. Looks like I'm hooped here.

Hi Steve,

I have an Acer laptop running XP which works fine with Yand and calibrates
no problem, but I did notice that like many laptops it doesn't have the
usual 'Line Input' setting, and the signal input comes in via the 'microphone'
line instead. This works fine, but if the 'Advanced' button is selected and
'mic boost' switched to 'on' the input level and SNR go ballistic, so I have
to run it with this de-activated. This may not be the case with all laptops,
but it might be worth checking yours to see if it is set up the same way
and this setting is ticked.

73 for now, Alan.

Thank you Alan. This laptop also has no 'line' input so I have had to go via the microphone input as well, via a 600 ohm transformer from the radio. I don't recall seeing a 'mic boost' in the settings but I will check this now. It might answer many concerns if that is the case.

73 / Steve

Nope...no 'mic boost'...in fact my Advanced button was inactive and not clickable. I did find a 'Noise Reduction' option that had been activated so perhaps that was causing some clipping / distortion....will watch and see.

Steve

Hello Steve,

This is hard to diagnose remotely...

- You must make absolutely 100% sure that Yand is selecting the correct input.

- Note that the scope function is autoscaled, so even when nothing is connected, you may still see "something" on the image. (noise, hum, all kinds of spiky artefects etc..)

- When using calibrationsignal.wav, you must see a clear, slightly "warbling" sine wave, NOT a block wave. Make sure that the signal amplitude is NOT clipped. If it is, you need to adjust the input volume in Windows' audio settings.

- Yes, Yand will remember the calibration settings, IF you have pressed the "Save Factor" button. Calibration is normally a "do once and forget" action.

- Some laptops have a combined Line-In/Microphone input, and will (should?) ask what input you wish to use each time something is plugged in.

- Each time the Audio Input button is pressed in Yand, it will re-enumerate the available audio inputs. If you change something in Windows WHILE Yand's audio input window is open, these changes will NOT be reflected in Yand until you close/re-open the audio input selection window.

Regards - Dirk

5193. NAVTEX CLE168 - FINAL DETAILS

Yahoo group: navtexdx (2013)
Date: 2013-03-25 11:46:37 UTC
From: Brian Keyte
Topic: 5193 Message: 5193

Hi all

Here are the final details for this weekend's co-ordinated listening event,
our 6th CLE dedicated to receiving Navtex stations. Please read it
carefully to avoid problems in using your log.
In this Event you can sleep through each night, knowing that the PC will
store details of your 'catches' for you to go through at a civilised time!
Most Navtex Stations have service ranges of 250-400 nautical miles and
they can provide very good DX opportunities for our sensitive receivers.

Days: Thursday 28th March - Tuesday 2nd April
Times: Start and end at midday, your local time
QRG: 490kHz , 518 kHz, 424 kHz, 4209.5 kHz
(plus other HF frequencies (6314, 8416.5, 12579, 16806.5 .. .)

Note the EXTRA 24 HOURS both at the start and at the end.

Advice already sent about this Event is at http://www.ndblist.info/cle.htm
For FULL Navtex advice go to http://www.ndblist.info/datamodes.htm
All the Navtex information is in the lower part there:
Details are given of several good decoders which are freely available
including Dirk's excellent YaND and the older SeaTTY (30-day trial).
Alan's comprehensive WORLD NAVTEX DATABASE was recently updated.
Members' previous Navtex reports are included in REU/RNA/RWW.
Seeklists made from there, and other advice about the Event, can be found
from our CLE page, http://www.ndblist.info/cle.htm

Please send your CLE log to the List in a Plain Text email if possible. Use
'CLE168' in its title. Show these main log items FIRST on each log line:-

The date (or day No.) and UTC (the day changes at 00:00 UTC)
The nominal kHz (490 or 518, etc.)
The $ - - call Ident. as shown in Rxx and in the World Database
E.g. $04R for San Juan, PTR. (After the $ is the 2-digit Navtex
Area No., then the Station's 'slot' letter that you received).

The station name (location) should go LATER in the same line, with any
other optional data such as distance, language used, etc.
WWSU supports the reporting of Navtex.
This weekend many of us will change 'local time' on our house clocks -
do make sure that shack and PC clocks show UTC and are NOT changed.

CHECK ALL YOUR LOG ENTRIES. Make sure that each decoded
message shows the as-transmitted Station letter and that each message
contains text confirming the identity of the Station you are showing.
The content of the message should be consistent with the 'slot' letter
that you received. If you are in ANY DOUBT about it, please flag it as a

query and show a full copy of the raw message after your main list.

Please also include a copy of the raw decodes for any RARE DX and for
any Stations NEW to the Rxx Database. It is suggested that you could
also do this for loggings over about 2,000 km (preferably not for ALL
loggings!)

As usual the combined results will show details of the decoders we
used so please say which one(s) you ACTUALLY USED. Also tell
us your receiver and aerial details and, of course, your location.

Please send your log as you normally do - i.e. either to NDB List or
to NAVTEX DX List (please NOT to both Lists and not direct to me).
I shall take results from both Lists and I'll send the 'Any More Logs?'
and the Combined Results, etc., to both Lists.

I will confirm the 'Final' logs that I have found at around 17:00 UTC
on Wednesday, but do make sure that your log has arrived on the List
by 08:00 UTC on Thursday 4th April at the very latest.
I hope I shall be able to send all the combined results on that day.

Below are some bits of extra guidance that may help you to avoid
problems and may answer some queries.

Good decoding!
Brian

From: Brian Keyte G3SIA ndbcle'at'gmail.com
Location: Surrey, SE England (CLE co-ordinator)

Please include only ONE logging of each station
i.e. Frequency + Area No. + 'Slot' letter.
(On 518 kHz, $01E Niton and $01K Niton are different Stations,
as are $12J Kodiak(east) and $12X Kodiak(west), etc.)

If you are frequently switching frequencies it is important to
KNOW THE TIMES that apply to each - it is very easy to allocate
a logging to the wrong frequency.

Various receiver settings work well with a fairly wide IF filter - e.g.:
USB with receiver set 1.0 kHz lower than the frequency of interest
(e.g. to 517.0 for 518 kHz).
Or CW with receiver set to the actual Navtex frequency and BFO set to
+1.0 kHz. Other offsets such as +1.5 kHz, +1.7 kHz, etc. could be used.

Listeners away from Europe may find they are short of target stations.
Anyone may make a CLE log by remote use of a receiver (such as the one
at Twente in Holland) provided that ALL THEIR LOGGINGS FOR THE CLE
are made through that ONE receiver.
(see http://websdr.ewi.utwente.nl:8901/)

Thanks Dirk - will look closely at this today.

> - You must make absolutely 100% sure that Yand is selecting the correct
> input.

Pretty sure this is not a problem as I can see levels change as I adjust volume from the receiver.

> - Note that the scope function is autoscaled, so even when nothing is
> connected, you may still see "something" on the image. (noise, hum, all
> kinds of spiky artefects etc..)

OK...that is what I thought might be happening. The random patterns I see on the scope are not nearly as active as when diving it with RX audio.

> - When using calibrationsignal.wav, you must see a clear, slightly
> "warbling" sine wave, NOT a block wave. Make sure that the signal
> amplitude is NOT clipped. If it is, you need to adjust the input volume in
> Windows' audio settings.

I have not checked this.

Well I have pretty much resigned myself to the probability that my laptop's sound card is not up to the task. I've played with countless S9 signals, including the calibration signal, and still seeing about 80% random characters. I guess I'll have to put Navtex on the shelf until I upgrade. Thanks for everyone's help and suggestions.

Hi Steve,

You might consider an external USB Soundcard, they don't cost a fortune and
are said to perform better than most internal ones, you can also transfer
them if you upgrade your PC as well, and it also leaves your internal soundcard
free for other tasks.

http://www.amazon.co.uk/Sweex-7-1-External-Sound-Card/dp/B00265L1S2

Loads of these on ebay as well, I'm planning to add one to my system when I
can get around to it.

73 for now, Alan.

5200. HF NAVTEX Logs from Whitley Bay, ENG

Yahoo group: navtexdx (2013)
Date: 2013-03-26 13:03:39 UTC
From: g3gms
Topic: 5200 Message: 5200

Hello All, Some HF logs from yesterday. In the RAW logs, column after time shows the SNR report, which is a very useful feature of YaND.

Best regards,
Mike

```
YYYYMMDD HHMM KHz ID CALL STATION,COUNTRY DIST (Km)

Hi Alan and thank you for this suggestion. I will check it out today. I rather like my old laptop as it has the wonderful 'serial port' that is missing on anything newer it seems.

Hi Steve,

Yes, that serial port is useful if you are using any of the datamodes to transmit signals, you need one to get the PTT to work on some machines and I've had to buy one of those Virtual USB Port to Serial Port adapters to get them to work with my newer laptop, pity they're no longer fitted as standard now.

I was just searching ebay and found that they now do some USB soundcards that are the size of a dongle or USB memory stick, and only cost a couple of pounds, though how well they'd perform for decoding I'm not sure, but since they only cost a couple of pounds they could be well worth trying.

This is an example of one, it isn't a 'soundblaster' type, but is small enough and cheap enough to be useful.

<http://www.ebay.co.uk/itm/USB-EXTERNAL-3D-7-1-CHANNEL-AUDIO-PC-LAPTOP-SOUND-CARD-ADAPTER-7-1-CHANNEL-/400299801430?pt=UK_Computing_ComputerComponents_SoundCards&hash=item5d33ba3b56>

Since my Acer laptop comes with 4 USB Ports I wonder if I could buy four of these and have four decoders running at the same time (five if I use the internal soundcard as well!) :-D

73 for now, Alan.

5203. Navtex Puzzle?

Yahoo group: navtexdx (2013)
Date: 2013-03-26 18:48:01 UTC
From: Brian Keyte
Topic: 5203 Message: 5203

Hi all

YaND, running on this laptop for the first time, caught a strange one this afternoon:

```
yyyymmdd UTC kHz ID Station km
-----------------------------------------------------------------
20130326 1415 518 $00G UNID

---

2013-03-26 14:15:56 76> ZCZC GT64
2013-03-26 14:15:58 77> TEST MESSAGE
2013-03-26 14:16:01 78> UK MRCC FALMOUTH
2013-03-26 14:16:02 78> NNNN
```

It seems to be using Cullercoat's Slot letter, strange as Falmouth is in the SW of England and Cullercoats in the NE covers the east coast.

By chance Cullercoats came up with the same message number (64) later this afternoon about something quite different, also suggesting that the UNID may have come from somewhere else? But none of the databases seems to have another $01G.

```
yyyymmdd UTC kHz ID Station km
-----------------------------------------------------------------
20130326 1701 518 $01G GCC Cullercoats,ENG 424

yes...I saw those as well but came to the conclusion (perhaps the wrong one) that they would likely not be much of an improvement but who knows. I am still amazed at how much storage capacity is now available in these small inexpensive memory sticks so perhaps the sound card stick is also very capable.

Hi Brian,

All the UK's Navtex messages are produced at MRCC Falmouth and 'remoted' out
the Cullercoats, Portpatrick and Niton transmitter sites, and I have seen
these in the past from time to time. The UK Coastguard have been responsible
for all UK Navtex services since the Coastal Radio Stations closed down.

73 for now, Alan.

Hello Steve,

I guess so too. As explained earlier, a sound card may be off by a few %, but this normally is a *stable* deviation (apart from minor and inconsequential variations caused by temperature fluctuations)
I guess your sound card (or its driver??) is somehow very unstable.

If you're willing to spend the time, I can only give the advice of last resort: : "Download the Latest Drivers" ...

Regards - Dirk

5211. Logs Rotterdam 26/27 March 2013

Yahoo group: navtexdx (2013)
Date: 2013-03-27 08:42:01 UTC
From: Vincent Schriel
Topic: 5211 Message: 5211

After several weeks of hardware problems yesterday I decided to install a new used laptop. A short story with some pictures of the equipment I use for Navtex. It is a HP / Compaq laptop with poor internal soundcard. So I installed an external USB, a Behringer UCA202. Cheap but very good: http://www.schriel.nl/hp.jpg

On the laptop is running Studio 1 at both 490 and 518 khz:
http://www.schriel.nl/Studio1.jpg
And two YaND's: http://www.schriel.nl/YaND.JPG
Im also use Virtual Audio Cable to get the audio signal from Studio 1 into both YaND's (two cables)

Last night 518 stopped around 01:00 hours. I hope it's a incident. 490 loged the whole night. The results:

Best regards,

Vincent

5213. Guam 12579 KHz 1900 time slot

Yahoo group: navtexdx (2013)
Date: 2013-03-27 20:24:02 UTC
From: DirkCL
Topic: 5213 Message: 5213

Hi all,

I usually monitor GUM in the 1500 time slot with rather varying results. Today I tried the 1900 time slot (as Mike g3gms did) and got nearly 100% perfect copy. Time will tell if this is just coincidentally.

Regards - Dirk

P.S. this was received with the whip.

From: Roelof Bakker
Topic: 5213 Message: 5214

Hello Dirk,

19:00 UTC is about 25 minutes after sunset, I believe.
So, this could be grey line propagation, which is often good for long distances.

There are a bunch of propagation prediction programs available, which might confirm this.
I have not yet looked into this, but it might help to find the right opening.

Between amateur radio operators it is common lore that when a band opens or closes, a vertical often outperforms other antennas.... And it is equal sensitive for long and short path propagation!

73,
Roelof

5219. NAVTEX CLE Health Checks!

Yahoo group: navtexdx (2013)
Date: 2013-03-29 13:17:00 UTC
From: Brian Keyte
Topic: 5219 Message: 5219

With our decoders busy - and maybe one or two early logs nearly ready -
here is a little check list of reminders to help us to avoid some problems:

UTC: Is your decoder program getting UTC times from your PC clock?
Will things go wrong if/when you change clocks for 'Daylight
Saving' this weekend? (Maybe, in Date/Time, you need to uncheck
"adjust clock for daylight saving"?)
The CLE started at midday your LOCAL TIME on Thursday and
will end at midday LOCAL TIME on Tuesday.

KHZ: Are you sure you will be showing the correct frequency for every
logging? (490 or 518, etc.)

RAW DECODES:
Can you include at the end of your log a copy of the raw decodes for:
Any log where you are IN ANY DOUBT about the identity of the Station
Any RARE DX
Any Station that is NEW to the Rxx Database.
(preferably do not include the raw decodes for ALL your loggings!)

DECODER: Will you remember to show in your log details of the decoder(s)
that you ACTUALLY USED (Name and Version).
Also please tell us RX and ANT details and of course your LOCATION.

ALL YOUR OWN WORK? Kind members often explain someone else's
doubtful logging by sending a copy of their own decode. But it's
not a good idea to claim a logging made good by someone else's.

Enjoy the rest of the CLE
Brian

RAW LOG for 490khz

Note 1. First half of message is clearly from SVH Irakleion (ZC QB93, Stathmos Irakleio) which I have claimed for not
the SVK Kerkyra shown on header for RAW file. (this was the second part of message blended in from SVK Kerkyra). YaND
makes knife edge decision, based on LAST Geographical Keyword received in the file.

Topic: 4742 Message: 5224

Hello all,

Propagation is not too cooperative at the monent.
The Kyoto Dst has not been above -20 for the last 44 hours.
The only T/A logged was NMR.

Daily log, all stations included:

20130329 1641 518 $01K GNI Niton,ENG 359

5227. 2013 edition of the ENDBH & NANDBH handbooks and CDs

Yahoo group: navtexdx (2013)
Date: 2013-03-31 08:06:15 UTC
From: Michael Oexner
Topic: 5227 Message: 5227

Hi all,

The 2013 edition of the ENDBH & NANDBH handbooks and CDs is ready!

This year's ENDBH contains the data of more than 7000 NDBs on 160+ spiral-bound pages in A4 format and the NANDBH shows the data of more than 5800 NDBs on 130+ pages.

The Google Earth compatible NDB waypoint file on the CD has been updated with the latest NDB coordinates so that you can "visit" NDB locations around the globe. The NDB picture collection has increased to a total of over 270 NDB pictures.

And the NDB sound clip section has grown as well. Latest additions include NDB audio from the Caribbean - all in all over 270 NDB sound clips from around the world.

In case you're interested in ordering a handbook or CD for other parts of the world please don't hesitate to ask, I'm able to produce customized versions for your special needs.

Delivery of the CDs will be via download. If you want a physical copy of the CD please indicate this when ordering.

Prices have been adjusted to reflect the latest changes in postage rates and foreign currency exchange rates. When using PayPal for payment please add the indicated amount to cover PayPal fees. Please find all relevant details at the following URL:

http://ndblist.info/beacons/NDBpublications2013.pdf

Once again I'd like to take this opportunity to thank all DXers who have sent me comments and updates, suggested improvements, pointed out errors, or provided NDB pictures and sound clips etc. Your continued support is very much appreciated :-)

And finally: Happy Easter to everybody!

--
vy 73 + gd DX,

Michael

ENDBH & NANDBH editor

5230. CLE168 Provisional 03 from Whitley Bay

Yahoo group: navtexdx (2013)
Date: 2013-03-31 22:29:05 UTC
From: g3gms
Topic: 5230 Message: 5230

Slowly slowly conditions improving!
HF logs very fragmented but sure ID's are correct, Time/Freq/Text all add up. May get better copy tomorrow but a log is a log!

Location: Whitley Bay, England, IO95gb
Receiver: Icom 735 with 500hz filter
Decoder: YaND 6_3D
Computer: Dual CPU 2.2Ghz, RAM 2.00GB
Antenna: PA0RDT miniwhip circuit 7m agl

YYYYMMDD HHMM KHz ID CALL STATION,COUNTRY DIST (Km)

5232. CLE168 Final from Antwerp,BEL

Yahoo group: navtexdx (2013)
Date: 2013-04-02 09:00:46 UTC
From: DirkCL
Topic: 5232 Message: 5232

Hi all,

Final report. T/A nil. Bad conditions on both MW and HF.
Last evening NRV Guam finally made it after 5 days of trying.

Remark regarding the SVO Olympia logging on 12603.5: I accidentally came across this station while tuning the 12 MHz band. SVO seems not to be listed as an official GMDSS station. Remove from log if needed.

Regards - Dirk

Report from : Dirk Claessens
QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]
Receiver : Perseus SDR [518KHz+HF], Lowe HF225 [490KHz]
Antenna : paOrdt Mini-Whip @ 5m
Navtex-Decoder : YaND 6.3

5233. CLE168 Provisional 04 from Whitley Bay

Yahoo group: navtexdx (2013)
Date: 2013-04-02 11:54:00 UTC
From: g3gms
Topic: 5233 Message: 5233

The last night turned up trumps for me with some previously missing and also DX catches from Oman and perfect copy from VON Canada, most unusual!

Mike Thayne, g3gms
Location: Whitley Bay, England, IO95gb
Receiver: Icom 735 with 500hz filter
Decoder: YaND 6_3D
Computer: Dual CPU 2.2Ghz, RAM 2.00GB
Antenna: PA0RDT miniwhip circuit 7m agl

5234. CLE168 FINAL log from Whitley Bay

Yahoo group: navtexdx (2013)
Date: 2013-04-02 14:49:51 UTC
From: g3gms
Topic: 5234 Message: 5234

This is a chronological compilation of all logs previously sent to the list as 4 seperate Provisional logs and are therefore duplicates of those already sent. This is just to confirm and clarify this as my FINAL log, with nothing new added, 63 logs.

I have sent in RAW logs for RARE DX or questionable logs, as requested by Brian but all other RAW logs are easily available here
if requested to be seen.
Special thanks to Brian, Vincent and Dirk for the nightmare task in dealing with our reports.
Good fun, next time I will have a rotating directional aerial to null out the big guns but that will mean staying up all night, which is no longer an easy trick.

Mike Thayne, g3gms
Location: Whitley Bay, England, IO95gb
Receiver: Icom 735 with 500hz filter
Decoder: YaND 6_3D
Computer: Pentium E2200 Dual CPU 2.2Ghz, RAM 2.00GB
Antenna: PA0RDT miniwhip circuit 7m agl

PREVIOUSLY SENT TO THE LIST.

5237. CLE 168 Log from N. France

Yahoo group: navtexdx (2013)
Date: 2013-04-02 18:01:13 UTC
From: Jean Jacquemin
Topic: 5237 Message: 5237

Hi all,

I used previous versions of YaND once or twice a few years ago
and at that time I didn't find it more sensible and/or a better
decoder than SeaTTY I was familiar with.
This CLE was a good opportunity to rediscover that nice decoder
and the many goodies it provides us with. It now is my favourite !!
Unfortunately it still lacks an " Enhance Propagation" ability ;-(

Some say Navtex CLE are for the lazzy ones , I can't agree less !
In my case overnight recordings with WinradHD didn't work that
well for decoding , so I had to struggle all nights long with my
directional 1530 indoors according to the (assumed...!) schedules.

5238. CLE 168 final

Yahoo group: navtexdx (2013)
Date: 2013-04-02 18:30:13 UTC
From: R.Connolly
Topic: 5238 Message: 5238

Hi,
Below is my final log for CLE 168. I was a little disappointed that signals from the eastern Med region were scarce however the fact that I did manage to catch a couple of trans-Atlantic stations at this time of the year made up for it. For the last night of the CLE I decided to try something different for me by leaving the equipment running on one of the HF frequencies and decided to use 8146.5 kHz. Normally I stick to 518 kHz mainly and occasionally 490 kHz so picking a HF frequency was interesting. The thing I like about the navtex CLE is that you set up everything and just let it run unattended for as long as you want and then switch frequency as an appropriate time, normally during daylight when the regular daytimers are coming in and let it run again. My trusty old Pentium 2 IBM Thinkpad 600E runs 24/7 decoding navtex signals via SeaTTY. Then normally every few days I have a trawl through the raw signals to see what has been received.

5240. NAVTEX CLE168 - ANY MORE LOGS?

Yahoo group: navtexdx (2013)
Date: 2013-04-03 17:08:51 UTC
From: Brian Keyte
Topic: 5240 Message: 5240

Hello all

Below are my lists of CLE168 logs found in approximate
arrival order (of 'Final' logs).
Please check carefully that yours is included.

Do make sure that any remaining logs have arrived on the List
by 08:00 UTC tomorrow (Wednesday) at the very latest.

I hope to finish making the combined results tomorrow.

5241. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-04-03 20:22:58 UTC
From: Roelof Bakker
Topic: 5234 Message: 5241

Hello all,

Those who though that conditions were poor during the NAVTEX CLE, last night was worse!
Not a trace of T/A stations, which is pretty rare.
Bodo was also missing, but Bjuroclubb made it, whilst I did not see it in CLE 168!
So there is always a surprise, either good or bad.

Daily log, summer setting, all stations over 1000 km:

From: Brian Martlew
Topic: 5067 Message: 5242

I was away over the Easter weekend so unfortunately missed the CLE
although by all accounts conditions were pretty miserable! It seems
that things haven't improved much - the only T/As were a brief
fragment from San Juan and part of a message from what was almost
certainly $04Q Sydney but didn't contain any header or clear
identification.

Brian

5243. At Last... Yand 6.x User Manual

Yahoo group: navtexdx (2013)
Date: 2013-04-04 14:55:33 UTC
From: DirkCL
Topic: 5243 Message: 5243

Hi,

I guess most users will have figured it out themselves by now, but here it is: The official Yand User Manual for v6.x

<http://groups.yahoo.com/group/navtexdx/files/Navtex%20Software/YAND%20Navtex%20%20Decoder/>

Regards - Dirk

5244. Re: At Last... Yand 6.x User Manual

Hello Dirk,

Many thanks for the new YaND User Manual. Yes I thought I had it figured out for myself but now you have given me lots of pointers to get so much more out of the facilities etc available.

Writing manuals is hard work but greatly asppreciated by the end user.

Best regards,
Mike, g3gms

5245. NAVTEX CLE168 - results

Yahoo group: navtexdx (2013)
Date: 2013-04-04 16:56:30 UTC
From: Brian Keyte
Topic: 5245 Message: 5245

Hello all

This is to let you know that the combined results will be available in the morning. I'm ALMOST there, but I have to be away from home all this evening.
It is tempting to send them now without quite finishing the checking.
Common sense has prevailed!

Hi Mike (and others),

If you spot any errors, omissions, English grammar errors etc.. please let me know.

Regards - Dirk

Dirk:

Few small spelling errors:

Page 5 (two places) fysically should be "physically."

Page 10 The oscilloscope Y-axis scaling iautomatic -- I think this is supposed to be The oscilloscope Y-axis scaling is automatic

Page 10 "artefacts" should be "artifacts"

Page 13 "discutable" -- not sure what this should be, probably "debatable"

Again, congratulations on a superb program - easy to use and with many features not found elsewhere.

Thinking a bit about error statistics ... is there anything to be obtained from computing statistics on number of character errors? This can only be partially valid, of course, but since the NAVTEX format always has a 4/3 bit structure so that it is possible to compute the percentage of received characters not matching the 4/3 structure. This will not, of course, be exactly the character error ratio since it will not detect multiple bit errors, but perhaps it would be a useful statistic that is invariant of receiver bandwidth. Or, perhaps it could be expanded to include the percent of characters corrected by the 2nd transmission of the character.

>

Early versions of Yand used an error rate indicator instead of SNR.
The main problem with that approach was the high non-linearity of the calculated error rate vs. the true "usability" of the signal.

One cause for this is the use of the CCIR476 character alphabet for Navtex. CCIR476 is a so-called "sparse" alphabet. Although 7 bits are available, only 35 of the 127 possible bit combinations are used (those that have a 4/3 one/zero ratio) , a feature that makes error detection easy: any bit combination received that is not defined as valid in the CCIR-table is in error.

But, a side-effect is that random noise will contain approximately 27% perfectly valid characters! (that's not too bad: straight RTTY Baudot code would produce nearly 100% valid characters; only faulty start/stopbits can be detected)

To give meaningful results, an error rate must be calculated over the last N characters. With N large, it will be slow. For a small N, it would be a very "jumpy" indicator. And so on, that's the story.

The current pseudo-SNR is not perfect, but, on a relative/comparative basis for a given receiver IF, the results are coherent. When I find the time I will post the results of a test I recently did. In short, I have plotted SNR values versus distance for approx. 25 stations situated from 100 to 7000Km from my QTH. The result was that SNR decreases approx. logarithmically in function of the distance, which makes sense.

Regards - Dirk

Dirk:

Thank you for the bit error analysis - makes sense. If the chance of a single character being in error is 27%, then the chance that both the original and delayed version of the character will both be in error is less, of course.

One odd thing I've noticed with the current SNR indicator is that it will sometimes read 100% but the message is hopelessly garbled. This occurs with co-channel interference and the resultant inter-symbol conflict. Looking at the oscilloscope display (very useful feature) shows the inter-symbol interference and your description of the S/N methodology explains why this occurs. Nice sine waves are fed into the computer, just too many of them.

(If I don't have an accurate Lat./Long. for some listeners, their distances above may be a few km in error. Also, a few Station locations are not known with high accuracy.)

I hope to send a few co-ordinator's comments in a day or so.

This has been a difficult event to 'harvest' - I'm hoping nothing has gone too badly wrong in these results. Do let me know if it has! The high number of reporters means that some of the Excel tables are extra wide and may be a little difficult to view.

Good listening
Brian

Many thanks Brian, great job!

It seems I hold the record for duplicate loggings. :0(
I wrote a little quick & dirty program that was supposed to do the combining, duplicate eliminating etc.. of the logs at the click of a button. Quick & Dirty = Bug City!

Hi Jack,

Co-channel interference is a severe problem here in Europe as well.
Sometimes 3 stations are assigned the same time slot!

A sure sign of it is when you can see strong amplitude modulation on the raw signal. This is caused by the signals being in phase or in anti-phase, much like the sound of a 2-engine propeller plane with badly synchronized engines.

Regards - Dirk

5257. NAVTEX CLE168 - Co-ordinator's Comments

Yahoo group: navtexdx (2013)
Date: 2013-04-05 16:20:03 UTC
From: Brian Keyte
Topic: 5257 Message: 5257
Attachments: 1 described; binary payloads are missing from this source WARC

CLE168 - INTO THE UNKNOWN?
In last weekend's Co-ordinated Listening Event, several of us were trying Navtex for the first time. Some were also using a decoder for the first time. Many were re-visiting Navtex after two years, maybe with a different decoder. Several listeners seemed pleased to have been pushed into trying something new.

CONDITIONS
As often seems to happen, the CLE coincided with poor propagation. It is little comfort that listeners are reporting things are hardly any better now.
Six European listeners did manage some Canadian logs on 518 kHz and also on 518 Bob in Tasmania made several great catches from Japan, China and Hawaii.

NOW - THEN
The 37 listeners who sent logs was a record for our Navtex events.
Of those, 24 had also taken part in Navtex CLE141 two years ago (listening from the same country).
The attached table shows their NOW - THEN statistics for 490 + 518 kHz from the two events. They confirm that conditions were worse this time for DX, though the average number of Stations logged - 37 per reporter - was the same, probably because of the two extra days this time. Statistics are also shown for the other 13 reporters.

DECODERS
In Navtex CLE141 SeaTTY was used by 22 reporters, YaND by 1 and other decoders were mentioned by 8 reporters (4 reporters didn't tell us their decoder(s).
This time YaND was used by 24 reporters, SeaTTY by 10 and others by 6 reporters (again, 4 reporters didn't tell us).
The figures speak for themselves and we're all very grateful to Dirk for his excellent YaND decoder.

Many thanks to those who included selected raw logs. Especially for the more DX, unusual or suspect loggings they helped me - and Vincent no doubt - to try and sort out some of the difficult ones.

WHAT's NEXT?

For NAVTEX Lovers: If you are ONLY a member of NDB List, I'm sure Dirk and Roelof would be pleased to see your request to join the Navtexdx List (send an email to: navtexdx-subscribe@yahoogroups.com)

For CLE Lovers: If you are ONLY a member of Navtexdx List AND if you are interested in NDB logging, with or without CLEs, Alan would be pleased to see your request to join the NDB List (send an email to: ndblist-subscribe@yahoogroups.com)

Our next monthly CLE No.169 for NDB List members (searching for normal NDBs), will probably be over the weekend of April 26 - 29. Details later in the month.

AND FINALLY:

Many thanks to everyone for their logs and for the care they took in making them. Our thanks to Alan for all he does for us in the http://www.ndblist.info/ Website.
And of course, to Vincent, for his great work on the Navtex input to Rxx.

Our more special Listening Events usually bring some interesting extra comments in the logs. So I am leaving the last word to the listeners with my selection from their CLE168 logs below, each one from a different listener.

Good Listening
Brian

From: Brian Keyte G3SIA ndbcle'at'gmail.com
Location: Surrey, SE England (CLE Co-ordinator)

This CLE was a good opportunity to rediscover that nice decoder (YaND) and the many goodies it provides us with. It now is my favourite !!

My first NAVTEX CLE and any time that I really seriously played with NAVTEX. It was very interesting - - - It was a great CLE and a learning experience.

Having braved blizzards and storms to get to a remote scottish cottage for Easter, setting up a Navtex receiving station seemed comparatively trivial. - - Session was cut short by freshening winds and new-born calves being spooked by a mast waving around crazily. All the same, it was great fun.

I am not sure whether Mobile Radio, Al, USA on 8473 kHz is eligible for this CLE - if not, please leave it out. They send endless marine weather messages.

Being a Navtex newbie of only three weeks experience, I seek to be cautious in my logging.

This CLE was a bit disappointing - - - But it was fun trying.

The Turkish channel marker on 4209.5 kHz, which appeared after their Navtex broadcast made life very difficult, and whilst I was pretty sure I could hear Nha Trang in Vietnam in its scheduled slot, I was unable to decode this due to theTurkish marker bleeding all over the frequency!

Last evening NRV Guam finally made it after 5 days of trying.

I had not tried Navtex before so it was bound to be fun trying a new mode for the first time and it was very exciting to watch even some weak signals yield good messages. Many thanks - - for setting up these CLEs and encouraging listeners to try new things. The YaND decoder works very well, thanks to the developers for that as well.

I ran SeaTTY and YaND together. Thanks for the interesting challenge.

The thing I like about the navtex CLE is that you set up everything and just let it run unattended for as long as you want and then switch frequency at an appropriate time - - - Then normally every few days I have a trawl through

the raw signals to see what has been received.

Interesting trip to the shortwave frequencies. My activ shortwave time are long time ago.

SeaTTY's corruptions were partly corrected by YaND and vice versa.

Was on Holiday over the weekend, but did leave the computer and radio running.

I had an interesting time - I listened on a receiver in an area that is loaded with NAVTEX, unlike the western US!

Thanks to all coordinators for 'forcing me' into NAVTEX again!
Similarly, many thanks to Dirk for his excellent YaND program;

Good fun, next time I will have a rotating directional aerial to null out the big guns but that will mean staying up all night, which is no longer an easy trick.

That was an easy CLE - just let the computer do the work and harvest in the morning :) Now it's time to give the computer a rest, while I go off to work.

(Next time, maybe we'll include with our logs any specially unusual or interesting Navtex messages that we decode?)

Hello all,

Due to the ongoing drought, my noise level has increased somewhat.
This is caused my decreased screening by moisture of underground utility cabling.
The good news is that with rising temperatures, we will also have some substantial rain later his week!

5263. Yand SNR experiment

Yahoo group: navtexdx (2013)
Date: 2013-04-07 09:53:05 UTC
From: Dirk Claessens
Topic: 5263 Message: 5263
Attachments: 1 described; binary payloads are missing from this source WARC

Hi all,

I have done a little experiment to discover what the relationship is of Yand's pseudo SNR value versus the distance of the received station(s).

See attachment for results and further explanation.

Regards - Dirk

5266. Audio line isolation transformers

Yahoo group: navtexdx (2013)
Date: 2013-04-08 12:34:40 UTC
From: robinksg
Topic: 5266 Message: 5266

Hello all,

I'm having problems with noise generated by my Samsung R40 laptop while on AC while on 518 kHz and wonder if the group can help.

Looking back through this group's posts, I can see a few references to audio line isolation transformers. Can I ask if anyone still uses one and if so, can anyone recommend a make and model as there seem to be a wide variation of types and prices on the 'net?

Would appreciate any advice the group can provide.

regards
Rob

Hello Rob,

Do you live in he Netherlands?
If so, I can give you the details where to get some decent ones.

73,
Roelof Bakker

Hi Roelof,

No, not in the Netherlands, am in Wales, UK. But would appreciate any guidance you can give!

Rob

Hello Robin,

UK based Rapid carriers this one:

http://www.rapidonline.com/Electrical-Power/1-1-Line-Isolation-Transformer-82391

The Vtx-131-001 should be fine for this application.

73,
Roelof

Hi Roelof,

Thats great, thanks for that. I had found those through Google earlier in the day but hadn't known if they were suitable, so thats good news.
I guess its a case of finding a male-male audio cable, breaking into it and just soldering the 1:1 in between with some kind of strengthening ? Ive got some heat shrink which would enclose them I think.

cheers Roelof,
Rob

Hello,

if you have an old computermodem you can try to use the linetransformer from it. I used a linetransformer from an old ISDN modem between an AR7030 and the soundcard. Its impedance was 70 ohms so I had a 1 kiloohm resistor in series on each side.

No need to spent money on new things :-)

Good luck Sven

Good idea Sven, ah, if only I had been less efficient at recycling old modems 8 years ago !!
will keep an eye on the scrap bins!

I have been using the isolation transformer found on old
telephone/computer modems.

These old modems can often be had for the asking at some computer shops,
or for very little flea markets etc. Just requires a bit of work to
remove them from the circuit board.

cheers, Graham ve3gtc

Yahoo group: navtexdx (2013)
Date: 2013-04-10 19:23:26 UTC
From: DirkCL
Topic: 4043 Message: 5281

Hi all,

I have been busy searching a new and mysterious source of QRM the last days. On the Perseus I could see repeating diffuse bands of noise all over the spectrum from ~300KHz to ~ 3MHz. My noise floor (usually around -120..-125 dBm) was raised by a disastrous 15..20dBm! In AM mode, it sounds like a hissing noise with a flat audio spectrum. Walking up and down the street for 200 meters with the Sony 9600GR, I could perfectly null it on a constant bearing. When I decided to jump into the car and make a tour... it stopped.
I hope it never comes back...

Regards - Dirk

5286. Goodbye for now!

Yahoo group: navtexdx (2013)
Date: 2013-04-11 10:14:47 UTC
From: Brian Keyte
Topic: 1193 Message: 5286

Hi all

All seems quiet after the NAVTEX CLE, so its time for me to unsubscribe and go back to my usual 'home' at NDB List. (Maybe see you there at the end of April for CLE169?)

I enjoyed re-visiting Navtex and running the CLE on both the Lists.
Hopefully everyone will be happy for us to do it again in a year or so.
Many thanks for the help given in easing me back to the Navtex mode, especially from Dirk and Alan.

Good decoding
Brian

Hello, Conditions flat for me last night. I am pleased to notice there is still an original CW Op at Valentia EJK, showing his presence by signing off at the end of his message with ._ ._. ..._ ._ AR VA. Keep smiling OM some of us still remember the good old days with great affection, although there was no such thing as Navtex in my days as a ships R/O. All NAV messages were sent then in CW only and copied by ear.

From: DirkCL
Topic: 4043 Message: 5289

Hello all,

Dull conditions, and there's more to come in the next days, it seems...

Regards - Dirk

From NOAA SWPC:

IIB. Geophysical Activity Forecast: The geomagnetic field is expected
to be at quiet levels on day one (12 Apr), quiet to major storm levels
on day two (13 Apr) and unsettled to major storm levels on day three (14Apr). Protons are expected to cross threshold on day one (12 Apr), have a chance of crossing threshold on day two (13 Apr) and have a slight chance of crossing threshold on day three (14 Apr).

III. Event probabilities 12 Apr-14 Apr
Class M 50/50/50
Class X 15/15/15
Proton 99/30/10
PCAF red

5295. Re: [navtexdx] Re: Audio line isolation transformers

Yahoo group: navtexdx (2013)
Date: 2013-04-13 14:48:35 UTC
From: bob.blodge@...
Topic: 5266 Message: 5295

Hi Rob,

I have only just looked at my emails since a few days ago, so you may have an answer already !

There is a very helpful company in Bognor Regis who have a ! : ! " Line isolation transformer " for £ 5.99 (presumably standard 600 ohm)

Their phone number is 01243 842424, or web at www.squirestools.com or email them at sales@...

I have dealt with them, especially for tools and materials and have always found them very helpful.

I hope this helps

Incidently, I use two isolation transformers in my audio diplexer to feed the audio signal into 2 computers and I made these from standard transistor audio output transformers by splitting the centre-tapped primaries, but this was a fiddly operation and would not recommend it !

Cheers

Bob

5297. Re: Audio line isolation transformers

Yahoo group: navtexdx (2013)
Date: 2013-04-13 21:01:13 UTC
From: robinksg
Topic: 5266 Message: 5297

Hi Bob,

Thanks for that. Bit of a surprise as I had no idea Squires sold electronics! As the son of a model engineer, I am very familiar with Squire's name and my father can often be found deeply perusing the Squires tools and materials catalogue. The lathe section alone could keep him quiet for days at a time!

The 1:1 transformers are the same make and model that Roelof recommended, so I shall go down this route I think. I'm coming to the conclusion that I'm suffering more from a dodgy laptop on AC than an earth loop, but its good to have when Seatty is scrabbling for that weak dx.

thanks to you Bob and the others for the advice,
cheers
Rob

Hello Maurizio,

T/A is quite poor at the moment here as well.
However, improved fall conditions are only 6 month away!

Daily log:

5308. Uncheck autotuning permanently possibility?

Yahoo group: navtexdx (2013)
Date: 2013-04-16 21:31:18 UTC
From: pe1kel
Topic: 5308 Message: 5308

Dear Users of Yand.

Each time I start Yand I have to uncheck the autotuning.
Is there a possibility to uncheck it forever?
And the same to the signal polarity, every time I start Yand it checks the USB, I prefer LSB due to my receiver settings.
I can't find them in the ini-file.

Maybe these can be added in a next version of Yand ;-)

Best regards,

Adriaan.

5309. Navtex Logs from Warrington,ENG

From: Brian Martlew
Topic: 5067 Message: 5309

Propagation very much favoured paths to the west last night with a
number of good T/A signals. However it was a very different story to
the east with many of the East Mediterranean regulars not being heard.

5311. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-04-17 09:51:48 UTC
From: Roelof Bakker
Topic: 5301 Message: 5311

Hello all,

Due to lack of rain the ground is very dry here.
As a result I have a 60 kHz wide noise band between 360 and 420 kHz.
At the worst the noise is 7 dB higher than before.
Though 7 dB does not seem to be much, it spoils reception of weak NDB's in
that part of the band.

Using a phasing system constituting of a min-whip, an active loop and a
MFJ-1025 Noise Canceling Signal Enhancer, the noise can be completely
eliminated at the cost of a deep null in the omni-directional directional
reception pattern of he mini-whip. The direction of the null is about S-SW.

Looking at my overnight NAVTEX log, the null does no harm, except that
Monsanto is no longer decoded.
Which is not a great loss. Alger and Puorto Rico are not effected, so the
null must be quite small.

Hi All

Not done much Navtex recently, I've been playing with a SDR dongle with

Plane Plotter and HDTV.

It is really quite incredible what goes into a such a small space today

but the one I have does not go down to 518 KHz !

Navtex DX not too good recently but a bit better last night. Over 1500 Km

I had :-

20130416 1840 518 $03Q 9AS Split,HRV 1545

20130416 1925 518 $01U ESA Talinn,EST 1872

20130416 1957 518 $09X SUZ Ismailia,EGY 3544

20130416 2011 518 $03B 7TA Alger,ALG 1618

20130416 2055 518 $03F TAL Antalya,TUR 2966

20130416 2130 518 $03J LZW Varna,BUL 2294

20130416 2157 518 $03M 5BA Cyprus,CYP 3235

20130416 2208 518 $01N LFO Orlandet,NOR 1552

20130416 2236 518 $03P 4XO Haifa,ISR 3567

20130417 0010 518 $19B LGP Bodo,NOR 2029

20130417 0150 518 $03L SVL Limnos,GRC 2402

20130417 0219 518 $04O VON St.Johns,CAN 3690

20130417 0245 518 $04Q VCO Sydney,CAN 4281

20130417 0350 518 $01X TFA Grindavik,ISL 1951

20130417 0352 518 $04X VOK Labrador [JUL-OCT],CAN 3735

20130417 0452 518 $04F NMF Boston,USA 5238

20130417 0522 518 $02I EAL Las Palmas,CNR 2693

Labrador seems to have got its date wrong, and the

Boston message was identified since it was the only

station that would have mentioned Cape Cod and

Nantucket !

Still on the long wire, the preselector and the PALSTAR Rx

Cheers

Bob

Hallo Adriaan,

What you ask for is technically perfectly possible, but I have my doubts whether it is a good idea to make Yand remember these settings.

- I want to avoid the situation where a (novice) user sets the wrong polarity, messes things up, and thinks that stopping and restarting Yand will solve the problem. This is a classical example of the "Saving Too Many Settings Syndrome": causing problems instead of solving them.

- The default setting of Normal(USB) makes sense: all Navtex transmissions *are* using USB.

- The only reason I can think of for switching AutoTuning off, is when an NDB carrier is interfering with 518KHz as happens sometimes in Europe during winter(ARD Arad, JBR, Jasbereny). This may interfere with autotuning, but it is an exceptional situation.

Regards - Dirk

Hello Dirk.

Thank you for your explanation.
An interference signal next to the navtex signal on 518 KHz is the reason why I don't use the autotuning. Of course I can switch it off when I start the programm, no problem.
The same interference is less when I switch the receiver in LSB mode.
Then it is possible with a small filter and passbandtuning to get rid of this #$%$#$-signal for 90%.
So when I start Yand I immmediately check both parameters.
Anyway, it's not a big problem, I thought maybe there is a hidden setting-file.

For the rest: the programm is doing very well, especially for weak stations!!
Congrats with this development.

Best regards.

Adriaan.

I would like to see autotune as a sticky setting as well. With weak signals, I seem to find better lock and preamble decoding with auto-tune off and the center frequency at 1500 Hz. It's rare to see a station on this side of the Atlantic more than one or two Hz off, but with noise input the auto-tune will hunt up and down 100 Hz or more and takes some time to reset to 0 where the signal is not much above the noise floor.

As far as USB/LSB goes, I don't see the harm in making that sticky either, but that's of less concern in my particular case.

Perhaps a "return all settings to default" button would be what a beginner would look for since it would put everything into a known state.

Jack

5320. Back to Navtex DXing from Luebbecke, northwest Germany.

Yahoo group: navtexdx (2013)
Date: 2013-04-18 13:16:50 UTC
From: hans_juergen_karius
Topic: 5320 Message: 5320

Hi all,

I took the chance of better weather, less rain and higher temperature, and had a check of my ALA 1530. It behaved as if the amplifier had stopped working and produced only weak signal strengths. What I actually found was that the plug of the feed line had started corroding. I had not isolated it properly because it was meant to be just a makeshift. But then I had forgotten about it.

So this is what I received. The stations from the north and south are missing because of the direction of the antenna. This directional effect, I guess, is stronger at this time of the year with the higher attenuation of the signals. Nevertheless quite interesting to receive Haifa.

R&S EK071 + ALA 1530 west--east

73s
Hans

Hello Jack,

Over here in Europe, the frequency spread of Navtex stations is considerably larger. About a year ago I have investigated with a special version of Yand that logged the autotune frequency in use for each message received. I found that the spread was situated in a band of 35Hz centered on 518.000. (Stability per station was excellent). For the intended use of Navtex this is not a problem. For weak DX, frequency tracking can make the difference.

Regards - Dirk

5324. A few Mediterreanean logs last night in Northwest Germany.

Yahoo group: navtexdx (2013)
Date: 2013-04-19 10:06:11 UTC
From: hans_juergen_karius
Topic: 5324 Message: 5324

And not listed: Some Swedish and Norwegian stations plus Mondolfo, of course.

R&S EK071 plus ALA1530 east-west.

5325. Re: [REU] Log from Antwerp, BEL (> 1500Km)

Yahoo group: navtexdx (2013)
Date: 2013-04-19 18:29:06 UTC
From: DirkCL
Topic: 4043 Message: 5325

Hello all,

A fragment of Labrador could be logged, and very faint traces of San Juan were seen, not worth logging. Something is going on in the south. Monsanto is missing from the logs, as well as Alger, both normally strong here.

Regards - Dirk

5332. UDK2 Murmansk 12586

Yahoo group: navtexdx (2013)
Date: 2013-04-21 19:37:59 UTC
From: DirkCL
Topic: 5332 Message: 5332

Hello All,

This afternoon I was setting up the Perseus to monitor 12579, when I suddenly saw a signal coming up on 12586. Language seems to be phonetically spelled Russian. Bill Hepburn's site lists Murmansk UDK2, but on a different frequency and schedule. A Google excursion brought many logs of UDK2 Murmansk Sitor at 1200 UTC. REU gave no hits for Murmansk on 12586.

Regsrds - Dirk

20130421 1200 12586 $20K UDK2 Murmansk,RUS 2446

Hi Dirk,

I've got a 2005/06 Siebel "Spezial Frequenzliste" which shows UDK, Murmansk Radio on 12.586 kHz.
I left SeaTTY running and received two transmissions today.
The messages themselves were rather garbled

Betreff: [navtexdx] UDK2 Murmansk 12586

Hello All,

This afternoon I was setting up the Perseus to monitor 12579, when I suddenly saw a signal coming up on 12586. Language seems to be phonetically spelled Russian. Bill Hepburn's site lists Murmansk UDK2, but on a different frequency and schedule. A Google excursion brought many logs of UDK2 Murmansk Sitor at 1200 UTC. REU gave no hits for Murmansk on 12586.

Regsrds - Dirk

20130421 1200 12586 $20K UDK2 Murmansk,RUS 2446

Hello Joachim,

I noticed the same. The signal was quite strong (S6/7 @400Hz on the Perseus) but unstable in some way. The decoder was struggling to keep sync.

Regards - Dirk

Hi Roelof,

Instead of just switching off the monitor, I put the system in sleep mode last night. On wake up, both Yand and Perseus seemed to have survived it, but the USB connection had died.

Rrgds - Dirk

Hello all,

T/A propagation was not too bad on the NDB band.
However on NAVTEX, just one proper decode was found!

5351. UDK2 Murmansk 12586

Yahoo group: navtexdx (2013)
Date: 2013-04-30 15:26:13 UTC
From: hans_juergen_karius
Topic: 5332 Message: 5351

After reports in this group I had the frequency running for a couple of days and received transmissions rather regularly at 05:20 06:00 12.00 14:00 18:00 UTC. 12:00 and 18:00 UTC seem to be the main times. The messages were mostly short and garbled and I wonder who e.g. needs soccer results. See yourself. I used TrueTTY.

73
Hans, DL4YBP

5352. Re: [navtexdx] NAVTEX from Isle of Wight

Yahoo group: navtexdx (2013)
Date: 2013-04-30 17:55:47 UTC
From: bob.blodge@...
Topic: 5301 Message: 5352

Hi All,

Reception has improved slightly, or the local stations have not been on the air for quite such long periods as recently'

I have included the message from VOK Labrador as this was remarkably well decoded. The last few lines were not quite up to this quality..

The last UNID was in the X timeslot and the only really decoded words were CABO BIANCA, which is in Costa Rica and only a few hundred Km past San Juan. What the source was I have no idea !

Over 1500 Km were.-

5353. Silva S-15N software

Yahoo group: navtexdx (2013)
Date: 2013-04-30 20:23:06 UTC
From: BobS
Topic: 5353 Message: 5353

Hi,All,

I've just finished restoring a Silva S-15N which I want to dedicate to DX use.

This unit outputs data as RS232 serial so is easy enough to use with a general-purpose comms package, but it would be nice to use the package that was originally supplied with it.

Would anyone have this package and be able to let me have a copy?

Regards,

Bob

Hello all,

The Kyoto Dst dropped yesterday below -20 and at 19:00 UTC it was -78.
Since then it has recovered, but it is still -35.

The effect is immediately apparent; e.g. Bodo has gone missing.

Hi all,

Damn Istanbul Radio!
After their regular 1800 UTC transmission on 4209.5 they have the habit of leaving the transmitter on for another hour, sending ARQ sync trains continuously and suppressing DX.
Despite that, Yand managed to go in sync for a few seconds on the underlying DX:

2013-04-30 18:45:31 36> {}OREHA~ RR RR~~~YARR~TNRRRRRRRR~RV~
X~~~ERDRRRRRRRR~~~~~JGM
2013-04-30 18:46:10 37> ~{}CY~~RRRRRRRRR
2013-04-30 18:47:21 34> ~VX~~~W~~{}CHINA
2013-04-30 18:47:30 38> ~~~RRRRRRR RRQ~~~Q~~444444444`-4~~~~44444644444
9=~~444444444
2013-04-30 18:49:37 27> CLA~ZQ~~~~~{}RR
2013-04-30 18:56:22 31> Z~FQ~~RRRRRRRRRRAR~HCY~~RRRRRRRRRRP~~UJ~~R~R{}R
2013-04-30 18:57:05 74> ~~~ NGR~~~~~{}

This is presumably 11Q XSG Shangai which I have logged many times around that time in the past.

The RRRRRRR/4444444 sequences are caused by yand going in sync on the signal.

Regards - Dirk

5360. Logs REU - TAH - Istanbul, TUR

Topic: 5360 Message: 5360

Hi list,

Yesterday I logged SITOR-B FEC transmissions from TAH, Istanbul Turk Radio
on 8431 kHz for the first time.
Their transmission schedule and frequencies can be found here :
http://www.mgm.gov.tr/en-US/marine-broadcasts-shipping.aspx

The transmission covers marine weather forecast bulletins for the seas
covered by 15°E to 50°E & 25°N to 50°N and they really seem to be regularly
transmitted at 0800 and 2000 UTC.
The first part of the message is in Turkish, the second part in English
language.

From: Roelof Bakker
Topic: 5364 Message: 5365

Hello Mike,

Yes, I saw it as well.
There are three Dutchmen missing, one is stemming from my area.
This does not look good, I'm afraid.

73,
Roelof

Indeed Roelof, I just checked sea temperatures for the area: 7C...
Even with decent sailing gear and life jacket survival time is counted in hours.

73 - Dirk

Hi All,

I was able to log $12C Nha Trang, VTN on 4209.5 last night, after Istanbul stopped its transmissions. This station was logged before by me and others back in feb 2011, but was not heard anymore since then.
(because of conditions??)

ATTN. Vincent: I could not find Nha Trang on REU. See below for station details as found in:

5376. YaND & Perseus

Yahoo group: navtexdx (2013)
Date: 2013-05-06 08:12:23 UTC
From: g_muha
Topic: 5376 Message: 5376

QUESTION: Is there a particular setting of a Perseus SDR that must be made to permit its output to be directed to YaND? Fr example, are drivers required in addition to those in the normal Perseus install?

COMMENT: I am attempting to use my newly received Perseus to monitor Navtex transmissions. I receive strong signals for a number of Navtex stations as viewed at 518 kHz on the Perseus "signal" screen but only a very level of noise on the YaND "signal" display. I have carefully checked that the Perseus/ YaND are not being overdriven and that the Perseus bandwidth is correctly set. Changing the Perseus operating mode (i.e. CW, USB, LSB) does not improve the situation. I have tried opening YaND first followed by Perseus and the reverse. Again no improvement. The Perseus signal is simply not getting through to the YaND software.

YaND is working properly and I have the system correctly setup, i.e. cables are OK, YaND audio source OK, etc. Of this I am certain because when I simply switch the USB connecting cable from the Perseus to my SDR-IQ receiver running under Spectrum Lab control, YaND jumps to life and gives a clear decode. Understand that the only change made in this test is a switch in the destination of USB cable.

My computer is running under Vista control on a Dell Desktop with an Intel Core quad 2.67 GHz CPU and 8 GB of memory.

Comments/ suggestions/ etc. on this problem will be gratefully received. Thank you.

73, George M (N2XM)

Hi George,

You'll probably have to play around with the "Realtek" audio features of
your PC - klick on the red speaker icon in the bottom right corner of
your monitor (System Tray).

When you find the list of active audio devices, right klick and select
"show disabled devices". Hopefully one will be something like "stereo".
try that one.

Hello George,

Perseus sends its audio to:
1/ the speakers
2/ To Virtual Audio Cable (VAC) - if installed and configured.

It's a pity that Perseus doesn't present itself as a sound card (as VAC does) but that's the way it is.

So you have 2 options: install VAC and set that as input for Yand via the Audio Input button, or patch the headphone output to Line In or Microphone, and select accordingly from Yand.

As Don suggested, selecting "Stereo Mix" aka "What U Hear" is another option, but many PC manufacturers do not install this driver by default because it makes copying music CD's too easy...

Another disadvantage of using Stereo Mix is that it can take a lot of fiddling with the settings to get rid of the sound (who wants to hear a Navtex signal all the time?) without also switching off the audio for Yand.

Regards - Dirk

With Perseus and YaND on my HP Pavilion dv7 laptop I had to use a jumper from the earphone output jack to the microphone input jack of the laptop. Make sure your gain is low enough so you do not overload YaND! Works fine.

Subject: [navtexdx] YaND & Perseus

QUESTION: Is there a particular setting of a Perseus SDR that must be made to permit its output to be directed to YaND? Fr example, are drivers required in addition to those in the normal Perseus install?

COMMENT: I am attempting to use my newly received Perseus to monitor Navtex transmissions. I receive strong signals for a number of Navtex stations as viewed at 518 kHz on the Perseus "signal" screen but only a very level of noise on the YaND "signal" display. I have carefully checked that the Perseus/ YaND are not being overdriven and that the Perseus bandwidth is correctly set. Changing the Perseus operating mode (i.e. CW, USB, LSB) does not improve the situation. I have tried opening YaND first followed by Perseus and the reverse. Again no improvement. The Perseus signal is simply not getting through to the YaND software.

YaND is working properly and I have the system correctly setup, i.e. cables are OK, YaND audio source OK, etc. Of this I am certain because when I simply switch the USB connecting cable from the Perseus to my SDR-IQ receiver running under Spectrum Lab control, YaND jumps to life and gives a clear decode. Understand that the only change made in this test is a switch in the destination of USB cable.

My computer is running under Vista control on a Dell Desktop with an Intel Core quad 2.67 GHz CPU and 8 GB of memory.

Comments/ suggestions/ etc. on this problem will be gratefully received. Thank you.

73, George M (N2XM)

Hi George;

I ran YaND with Perseus for last month's NAVTEX CLE with great results on a Dell Inspiron desktop with Vista. I used a physical cable to connect "headphones out" to "Line In". I then restarted YaND and adjusted down the volume slider and it immediately began decoding. I do not have VAC installed.

From: Roelof Bakker
Topic: 5376 Message: 5385

Hello George,

The audio out from my PERSEUS is routed via a EMU 0202/USB external sound card.
For NAVTEX reception with YaND, I use a Y cable at the headphone output of the EMU.
One branche is connected to the headphone, the other goes to MIKE in of the EMU 0202/USB.

This is the easiest way to get it working.
The MIKE input of the EMU 0202/USB is selected in YaND under the knob AUDIO IN.

To see what options you have, select in YaND AUDIO IN.
You will see all the hardware that is available on your system.

I hope this helps.

73,
Roelof, pa0rdt

Thanks Bill, Dirk, Don, and Tom ... re: jumper "out to in" to run YaND with a Perseus SDR. Works just fine on my Vista desktop. As always the simplest solution is the best. Your comments/help very much appreciated.

Re: Perseus and NDB DXing ... this is an excellent receiver and, with the installation of the scheme to narrow the passband down to a few cycles via the modification devised and kindly made available by Roelof (PA0RDT), I expect it will prove excellent for my use in NDB DXing.

While I like the hardware, I am less amorous about the Perseus software which permits only an either/or choice of spectrum/waterfall display. At my age my ears serve admirably in supporting my eyeglasses but they often deceive me in receiving code ... the "dits" sometimes run together and I hear "dah". With my now retired SDR-IQ/Spectrum Lab receiver, I had taken to using a spectrum display to set the filter and the waterfall display to confirm my reading of the code. I am investigating other software packages, which permit simultaneous spectrum/waterfall displays, e.g. WindRad. There are probably others; any comments/suggestions would be appreciated.

In any event I need experience using the Perseus before I settle on a final DXing configuration for use in the upcoming fall/winter NDB DXing season. In the meantime I have taken to going to bed early and sleeping late while YaND does the heavy lifting for my Navtex logging.

Again thanks to all in the group who provided help/comments concerning my question.

75, George M (N2XM)

Hello George,

> There are probably others; any comments/suggestions would be appreciated.

My ears are still far better than any visual package so far.
However if you are in need for a nice and free program, go for HDSDR:

Hello all,

So far, each night Canadian NDB's have made it into the Netherlands.
Lately they were pretty weak.
Last night showed a longer and better opening, which results in two
decodes of VCO!

Topic: 5301 Message: 5391

Hi Roelof,

It is strange how reception differs so much fropm one location to

another. My night before last was better than last night in the number

of messages decoded from the same stations.

May 6/7 was

20130506 1840 518 $03Q 9AS Split,HRV 1545

20130506 2009 518 $03B 7TA Alger,ALG 1618

20130506 2145 518 $03K SVK Kerkyra,GRC 2031

20130506 2154 518 $03L SVL Limnos,GRC 2402

20130506 2229 518 $03P 4XO Haifa,ISR 3567

20130506 2348 518 $09V SUK Quseir,EGY 4053

20130506 2351 518 $01X TFA Grindavik,ISL 1951

20130506 2354 518 $09X SUZ Ismailia,EGY 3544

20130507 0048 518 $03F TAL Antalya,TUR 2966

20130507 0131 518 $03J LZW Varna,BUL 2294

Hello Bob,

Yes, propagation is a weird thing.
However, on 518 kHz we have also to cope with co-channel interference.

Regarding Puorto Rico, even when the channel is clear not a shred of it
can be found lately.

5393. Re: Navtex Log from Antwerp, BEL (>1000Km)

Yahoo group: navtexdx (2013)
Date: 2013-05-09 15:00:33 UTC
From: DirkCL
Topic: 5348 Message: 5393

Hi group,

Logs from the last 2 days.
After being absent for over a month, Arkhangelsk has returned.
I guess this is not propagation related, but due to the fact that Rogaland/Limnos were late with their transmission.

73 - Dirk

5394. NAVTEX logs from Whitley Bay ENG

Yahoo group: navtexdx (2013)
Date: 2013-05-09 16:34:33 UTC
From: g3gms
Topic: 5062 Message: 5394

Hello, Arkhangelsk and Astrakhan gave me multiple messages last night albeit not perfect copy. Algiers not seen recently put in an appearance too. Good fun!

Mike Thayne, g3gms
Location: Whitley Bay, England, IO95gb
Receiver: IC735
Decoder: YaND 6_3D.
Computer: Dual CPU 2.2Ghz, RAM 2.00GB with
external soundcard (Behringer UCA202).
Antenna: PA0RDT miniwhip circuit 7m agl

Hello Dirk,

Regarding Archangelsk, I believe it is also a matter of propagation.

This is what I found at that time on the 7th an dthe 8th:

Hi Mike,

Your message triggered a spamfilter in Yahoo and was sent into moderation. I have no idea why...

Regards - Dirk

Hello Dirk,

Strange that my message triggered a spamfilter. Maybe some confusion
arose because I miss spelled Ismailia forgetting the second letter i.
Or maybe my personal details before the logs is not good. (I forgot to move them to the end of message as I normally try to do.)
Hope all is well this time!

Regards, Mike

Hi Mike,

Hard to tell, Yahoo behaves weird at times. The only thing I can think off is that "Ismailia" is repeated many times in the message.
I'll do a test.

Regards - Dirk

5409. Comms software problem

Yahoo group: navtexdx (2013)
Date: 2013-05-12 21:45:40 UTC
From: BobS
Topic: 5409 Message: 5409

Hi, All,

My Silva NAVTEX receiver is now up and running, using the "Terminal" comms software which was originally supplied with it.

Amongst the communications parameters which can be set is one for Buffer Size, which defaults to 100 lines. The software only decodes and displays up to this size, and then stops. The buffer can be cleared manually by means of a toolbar option which then clears the screen, but no amount of experimenting with Save options seems able to continuously write messages to a disk file, and clear the buffer automatically as necessary.

Any thoughts, anyone?

Regards

Bob

Hi Bob,

The "terminal" software you're using seems to have very limited capabilities. Have you tried this :

<https://sites.google.com/site/terminalbpp/>
(scroll down for the download link)

It's also called terminal.exe but has a "log" option that will write anything received from the selected port to a log file.

I have checked it and it does work.

Regards - Dirk

Thanks very much, Dirk, the Silva instructions are not the best (referring for instance to selecting Message Types, even though this option is only available when the unit is connected to a Silva VHF receiver) and seem to suggest that the only way messages can be saved is by copying them to a text editor or WP package.

I'll try your suggestion later.

Best regards

Bob

Not heard for a longer time here in northwest Germany. Almost without mistakes.

And then Yand mistook Svalbard for Rogaland. That would have bee a nice catch. :-)

5416. Porto Santo, Madeira on 518 kHz last night

Yahoo group: navtexdx (2013)
Date: 2013-05-14 07:42:56 UTC
From: hans_juergen_karius
Topic: 5416 Message: 5416

and also Astrakhan and Varna with 3 messages.

I have been looking for Madeira for a long time without success. I am quite puzzled about the reception of this station at the time of year and quite happy.

Does this have anything to do with the blackout of the lower shortwave frequencies yesterday?

73
Hans, DL4YBP

Date: 2013-05-14 13:23:23 UTC
From: Roelof Bakker
Topic: 5417 Message: 5418

Hello Maurizio,

Nothing here from your UNID at 02:58 UTC.
Looking at the text, it appears to be Greek.
So, it probably is from one of the NAVTEX stations from Greece,
transmitting a own language message for 490 kHz on 518 kHz.

Hi all,

A long string of messages from Astrakhan were logged, Arkhangelsk showed up again, and so did St. John's for the third night in a row.

Regards - Dirk

5424. Western Europe area: continuous carrier on 517.915 from Pinneberg?

Yahoo group: navtexdx (2013)
Date: 2013-05-16 07:23:17 UTC
From: DirkCL
Topic: 5424 Message: 5424

Hi,

There was a strong carrier on 517.915 all yesterday evening.
This morning it was gone.

The cause presumably was the Pinneberg transmitter.

Regards - Dirk

Hi Dirk,

I have noticed it too.
I have "notched" it for all night.

Thank you,

Maurizio

Hello Dirk,

The carrier on the lower shift disappeared at 04:28:48 UTC this morning.
A faded up and down between S2 and S7 and had a large effect on reception!
This is what I logged:

Hi Roelof,

The new loop seems to have very deep nulls. When I point it 300/120, Rogaland and Pinneberg simply disappear from the logs, not a trace.

I'm running the following test setup now:
Miniwhip + Lowe225 // Loop (on 3 mtr. PVC pole) + Perseus.

Yesterday I was watching Portpatrick coming in on the Lowe, then noticed that nothing at all was visible on the Perseus. I ran to the garden, rotated the loop 90 degrees, and yes, Portpatrick showed up perfectly.

(Ahem...I must admit I had totally forgotten that the directional pattern of a single turn loop differs 90 degrees from the multiturn tuned box loops I'm used to...)

Regards -Dirk

Hello Maurizio,

I don't think that will help, and may make things even worse.
When you notch out 517,915, you are in fact forcing the decoder to "run on one leg" for _all_ stations received.

Without the notch, some stations will be stronger than the offending carrier and will decode properly.

But in both cases, weak DX will be lost.

Regards - Dirk

> Rogaland and Pinneberg simply disappear from the logs, not a trace.

Nice to hear and it shows that the balance is excellent.
If you have some money to spare, you might consider purchasing a MFJ1025.
Using the mini-whip as main antenna and the loop as auxiliary antenna, you can create a deep single null.
In my case it reduces the noise floor and adds some gain in the forward direction.

Maybe someone in the club owns one and you can have it on loan!

The MFJ1025 needs a modification for LF, but it might work out of the box on 518 kHz.

73,
Roelof

Hello all,

Overnight the Kyoto Dst dropped to -40, but has already recovered.
It did not wipe out T/A reception completely, as a message from VCO was
received here, despite a fair amount of static.

From: George
Topic: 5431 Message: 5431

The following Navtex report is from the log at my primary Central New Jersey QTH. It serves to complement my first ever Navtex report dated 1 Apr 13 as logged at my secondary QTH in Middle Tennessee. I am currently updating all of my logs as I transfer NDB/Navtex files from my (kaput) Vista laptop to a new Windows 7 PC.

Hello all,

The Kyoto Dst dropped to -63 overnight and the Aurora index showed a whopping value of 10!
So it was a big surprise to find a message which is most likely from NME, Charleston, USA.
See below. VCO, Sydney, CAN, was also received.
On closer inspection it appeared that the Dst was hovering around -20 at the time of reception of both NME and VCO.
So reception should be very well possible.

Hello Roelof,

No sign of Charleston here; instead I got traces of Samsun here.
But Sydney made it on the loop! See below.

Regards - Dirk

Hello Dirk,

Excellent results for the loop, probably due to its directivity!
This confirms my findings that loops are excellent antennas.
However at my location they receive much more local noise than my
mini-whip.

At the moment I am using a phasing system with a loop and mini-whip, due
to a hopefully temporarily local noise problem. My impression is that the
noise floor is even lower than with the mini-whip on its own.

73,
Roelof

Hello Dirk,

notch was only 10 hz large, indeed decodes were quite bad.

Thanks,

Maurizio

Hello Maurizio,

The carrier was from a transmitter stuck on the lower shift of the FSK signal.
Navtex is RTTY with a shift of 170 Hz and the lower shift is at 517.915 and the upper at 518.085 kHz.
Last November we had a carrier here on the upper shift.
Notching it out the decoder will miss the necessary information, so this does not help.

73,
Roelof Bakker

Hello all,

Despite a low Dst value, propagation appeared to be not too bad!
I found two decodes from VCO, Sydney, CAN NL and since a long time NMR,
Puorto Rico, did make it as well.

HI All,

Conditions seem to be back to " fairly good" after a few nights of

poor.

Perhaps it is partly due to the station that used to keep its time

slot occupied by a blank signal, now behaving normally !

This was my 1500 + Km for last night and even San Juan gave

6 separated sections of a long weather report and one message

that refered to WINYAH BAY which is is South Carolina, a few

hundred Km up the US coast.

2013-05-18 23:59:10> 97? 9~ 943439~`~984~

I must say I'm impressed with the loop!

Details will follow later, but my preliminary conclusions are that:

- When (with the Perseus) measuring dBm over noise for BC and time stations on LW/MW , the whip is consistently better than the loop by 5..15 dBm. (the loop was pointed to the station

- But, because of its deep nulls, the loop really *shines* when it comes to suppressing Navtex co-channel interference and local QRM.
The strongest example was the whip (badly)receiving $1D Coruna, and the loop receiving $3D Istanbul:

Hello all,

Conditions are rather good, I guess.
Besides two decodes from VCO, Sydney, CAN, I also logged a new one:

Hi All,

I often get this message :-

2013-05-21 02:40:17> ZCZC RZ98

2013-05-21 02:40:18> LISBOA

2013-05-21 02:40:22> 210240 UTC MAY 13

2013-05-21 02:40:26> NO MESSAGES ON HAND AT

2013-05-21 02:40:26> LISBOA

2013-05-21 02:40:27> NNNN

My atlas puts LISBOA in California and the message

is in the R timeslot, so could this be from San Juan ?

Any ideas ?

Bob IOW

Hi Bob,

Lisboa = Lisbon,POR in Portuguese.

Regards - Dirk

Hello, Using a new build 4m loop pointing E/W, here is last night's over 1500km logs. No T/A but the big EU guns were firing at the same time as Sydney and St Johns. More experiments needed.

```
YYYYMMDD HHMM KHz ID CALL STATION,COUNTRY DIST (Km)

Good Morning Bob,

Even though I have not yet finished my first cuppa, I can assure you
that there is no city by the name of "Lisboa" in the Great State of
California, USA.

Me thinks you need a new "atlas"? Probably a derivative spelling of
"Lisbon", Portugal. LoL

5453. Re: [navtexdx] NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-05-21 13:45:03 UTC
From: Roelof Bakker
Topic: 5424 Message: 5453

Hello Dirk,

Thank you for the information about Baku, Azerbaijan, 3765 km.
This is a new country for me and at 90.4 degrees due east!
It is almost as far east as the nearest Canadian NAVTEX station is west.

Last night I found a most scrambled message from NMF, Boston, USA.
The header is correct and looking at the mixed up contents, it should be
Boston for sure.
See below my daily log entry.

Lisboa is Portuguese for the city we call Lisbon in English.

I've spent considerable time there many years ago -

Jack K8ZOA

And a " good morning " to you Don !

You are right, I have looked in another atlas and that one gives LISBOA PORT

as being in LISBON.

The following was from GOOGLE

Tiara Park Atlantic Lisboa, California, United States of America ...

hotels.webjet.com.au/tiara-park-atlantic-lisboa-california-united-states-of-america/ - Cached

Tiara Park Atlantic Lisboa in California, United States of America provides 5 star

accommodation. Tiara Park Atlantic Lisboa features Air-Conditioning, ...

And that seemed to confirm what my other atlas says !

You can't believe anything these days !

Many Thanks

Bob

Hello, 4 messages from Sydney, CAN last night.
Using the Loop antenna again. It's pretty obvious the deep nulls obtained by the loop in daytime do not exist with skywave reception at night. Next experiment to try Roelof's idea using "noise cancelling" techniques, to be continued.

Hello Mike,

> It's pretty obvious the deep nulls obtained by the loop in daytime do
> not exist with skywave reception at night.

For NAVTEX reception it might be slightly different.
This mode requires a signal to noise ratio of about 6 dB and though the loop has deep nulls, the net effect on signals just offside the null is less signal strength.
However as long as they are 6 db over the noise or another station solid decodes will be the result.

73,
Roelof

Hi Don and Jack,

I don't think this can be just a " mis-spelling "

I had precisely the same meassage this morning, in the same time slot (just after Sydney, in Q) and looking through my database, I found three others since I last configured the database to eliminate UNID's and, in any case, there is no Navtex Station called LISBON.

Going through all the GOOGLE references to Lisboa, California, it does seem that there is a Lisbon in CA and in this town (?) there is some sort of residential complex called LISBOA !

Quite why this needs a Navtex station is not obvious !

There must be a reason for this message and, hopefully, it will be revealed !

All the Best

Bob

Hello Bob,

I believe that at the moment test transmission are running from a
different location than Montsanto, POR.
There have been requests for signal reports.

It might be that this is a kind of test message and to distinguish it from
Montsanto, Lisboa is mentioned.

73,
Roelof
